## Section 1: Common Functions

### 1.1 General

#### 1.1.1 CE Conformity

**CE** This product is CE compliant to relevant EU directives.

#### 1.1.2 Reference

This product complies with IEC 60255-3, IEC 60255-6, IEC60255-11, IEC 60255-12 and IEC61000-4-8.

#### 1.1.2.1 Accuracy Reference Conditions

This product has been tested under the following conditions, unless specifically stated otherwise.

| Parameter           | Value   |
|---------------------|---------|
| Auxiliary supply    | nominal |
| Frequency           | nominal |
| Ambient temperature | 20 °C   |

#### 1.1.3 Dimensions

| Parameter  | Value              |
|--|--------------------|
| Width  | E10 case<br>260 mm |
| Height   | 177 mm             |
| Depth behind panel<br>(including clearance for wiring and fibre) | 241.5 mm           |
| Projection (from front of panel)                                 | 31 mm              |

See appropriate case outline and panel drilling drawing, as specified in Diagrams and Parameters of the Installation section, for complete dimensional specifications.

#### 1.1.4 Weights

| Parameter              | Value                  |
|------------------------|------------------------|
| Net weight<br>E10 case | 7PG2113/4/5/6<br>8.6kg |

## 1.2 Energising Quantities

### 1.2.1 Auxiliary Power Supply

IEC60255-11 &amp; EATS 48-4

| Nominal Operating Range |               | Absolute Range* | Comments   |
|-------------------------|---------------|-----------------|--|
| $V_{aux}$               | 24 to 60 VDC  | 18 to 72 VDC    | Low voltage PSU suitable for 24VDC, 30VDC, 48VDC and 60VDC systems |
|                         | 80 to 250 VDC | 64 to 300 VDC   | High Voltage PSU suitable for 110VDC and 220VDC systems.           |

\*No relay operation outside of this range is permissible or implied.

#### 1.2.1.1 Burden

| Attribute | Value                    |       |
|-----------|--------------------------|-------|
| 24V DC    | Minimum                  | 3.9 W |
|           | User Access (back light) | 5.3 W |
|           | Maximum                  | 8.0W  |
| 60V DC    | Minimum                  | 3.9W  |
|           | User Access (back light) | 5.2 W |
|           | Maximum                  | 7.3W  |
| 80V DC    | Minimum                  | 4.0W  |
|           | User Access (back light) | 5.5W  |
|           | Maximum                  | 6.5W  |
| 250V DC   | Minimum                  | 4.2W  |
|           | User Access (back light) | 5.4W  |
|           | Maximum                  | 7.5W  |

#### 1.2.1.2 Operational Features

| Attribute  | Value    | Comments  |
|--|----------|---|
| 0% Dip Withstand Period  | 50ms     |   |
| Dip Immunity Acquisition Period  | 5minutes | Typical time after switch on to attain claimed immunity to dips |
| NOTE: Dips in supply that fall below the minimum voltage for a period greater than the 0% Dip With stand Period will invoke a relay reset.   |          |   |
| During conditions of auxiliary input voltage variations which are not described <sup>(1)</sup> in section 1.4.3.1, the relay may enter a safety protection mode where a power supply shutdown occurs. This condition is designed to protect the power supply from damage as well as prevent internal relay faults from developing into dangerous situations.<br>Once the relay has entered this safety mode, it may be necessary to reduce the auxiliary input voltage to zero volts for up to 30 seconds before re-application of the auxiliary supply will cause the relay to power up and operate normally. |          |   |
| (1) Using fuses as on/off switches or allowing batteries to run at very low cell voltages for extended periods and then attempting to re-charge them are examples of such auxiliary supply conditions.   |          |   |

### 1.2.2 AC Current

| Nominal |                                | Measuring Range        |
|---------|--------------------------------|------------------------|
| $I_n$   | 1 A or 5 A Phase, Earth models | 80 x $I_n$             |
| $f_n$   | 50, 60Hz                       | 47 to 52Hz, 57 to 62Hz |

Note. 1A and 5A nominal rating must be specified at the point of ordering.

#### 1.2.2.1 Burden

| Attribute | Value - |         |
|-----------|---------|---------|
|           | R Mode  | Rf Mode |
| AC Burden | 1.2 VA  | 3 VA    |

#### 1.2.2.2 Thermal Withstand

EATS48-5

| Overload Period | Overload Current     |             |
|-----------------|----------------------|-------------|
|                 | Phase, Earth and SEF |             |
|                 | 1A                   | 5A          |
| Continuous      |                      | 2.0 x $I_n$ |
| 10 minutes      |                      | 3.5 x $I_n$ |
| 5 minutes       |                      | 4.0 x $I_n$ |
| 3 minutes       |                      | 5.0 x $I_n$ |
| 2 minutes       |                      | 6.0 x $I_n$ |
| 3 seconds       | 57.7A                | 202A        |
| 2 seconds       | 70.7A                | 247A        |
| 1 second        | 100A                 | 350A        |
| 1 cycle         | 700A                 | 2500A       |

### 1.2.3 AC Voltage

| Nominal |              | Operating Range        |
|---------|--------------|------------------------|
| $V_n$   | 63.5V, 110 V | 270 V                  |
| $f_n$   | 50, 60Hz     | 47 to 52Hz, 57 to 62Hz |

#### 1.2.3.1 Burden

| Attribute | Value   |
|-----------|---|
| AC Burden | $\leq 0.02 \text{ VA at } 63.5 \text{ V}, \leq 0.06 \text{ VA at } 110 \text{ V}$ |

### 1.2.4 Binary (Digital) Outputs

Contact rating to IEC 60255-0-2

| Attribute                                     | Value                          |  |
|---|--------------------------------|--|
| Carry continuously                            |                                | 5A AC or DC                              |
| Make and carry<br>(L/R ≤ 40 ms and V ≤ 300 V) | for 0.5 s                      | 20A AC or DC                             |
|   | for 0.2 s                      | 30A AC or DC                             |
| Break<br>(≤ 5 A and ≤ 300 V)                  | AC resistive                   | 1250 VA                                  |
|   | AC inductive                   | 250 VA at p.f. ≤ 0.4                     |
|   | DC resistive                   | 75 W                                     |
|   | DC inductive                   | 30 W at L/R ≤ 40ms<br>50 W at L/R ≤ 10ms |
| Contact Operate / Release Time                | 7ms / 3ms                      |  |
| Minimum number of operations                  | 1000 at maximum load           |  |
| Minimum recommended load                      | 0.5 W at minimum of 10mA or 5V |  |

### 1.2.5 Solkor Contactor NO Contacts

|                |  |
|----------------|--|
| Contact Rating | Make and carry for 0.2s a burden of 6600VA with a maximum of 30A |
|----------------|--|

### 1.2.6 Binary (Digital) Inputs

EATS48-4

| Nominal  | Operating Range |               |
|----------|-----------------|---------------|
| $V_{BI}$ | 19 VDC          | 17 to 320 VDC |
|          | 88 VDC          | 74 to 320 VDC |

#### 1.2.6.1 Performance

| Attribute  | Value           |       |
|--|-----------------|-------|
| Maximum DC current for operation   | $V_{BI} = 19$ V | 1.5mA |
|  | $V_{BI} = 88$ V | 1.5mA |
| Reset/Operate voltage ratio  | ≥ 90 %          |       |
| Response time  | < 9ms           |       |
| Response time when programmed to energise an output relay contact (i.e. includes output relay operation) | < 20ms          |       |

The binary inputs have a low minimum operate current and may be set for high speed operation. Where a binary input is both used to influence a control function (e.g. provide a tripping function) and it is considered to be susceptible to mal-operation due to capacitive currents, the external circuitry can be modified to provide immunity to such disturbances.

To comply with EATS 48-4, classes ESI 1 and ESI 2, external components / BI pick-up delays are required as shown in fig. 1-1.

To achieve immunity from AC interference, a BI pick-up delay of typically one-cycle can be applied.

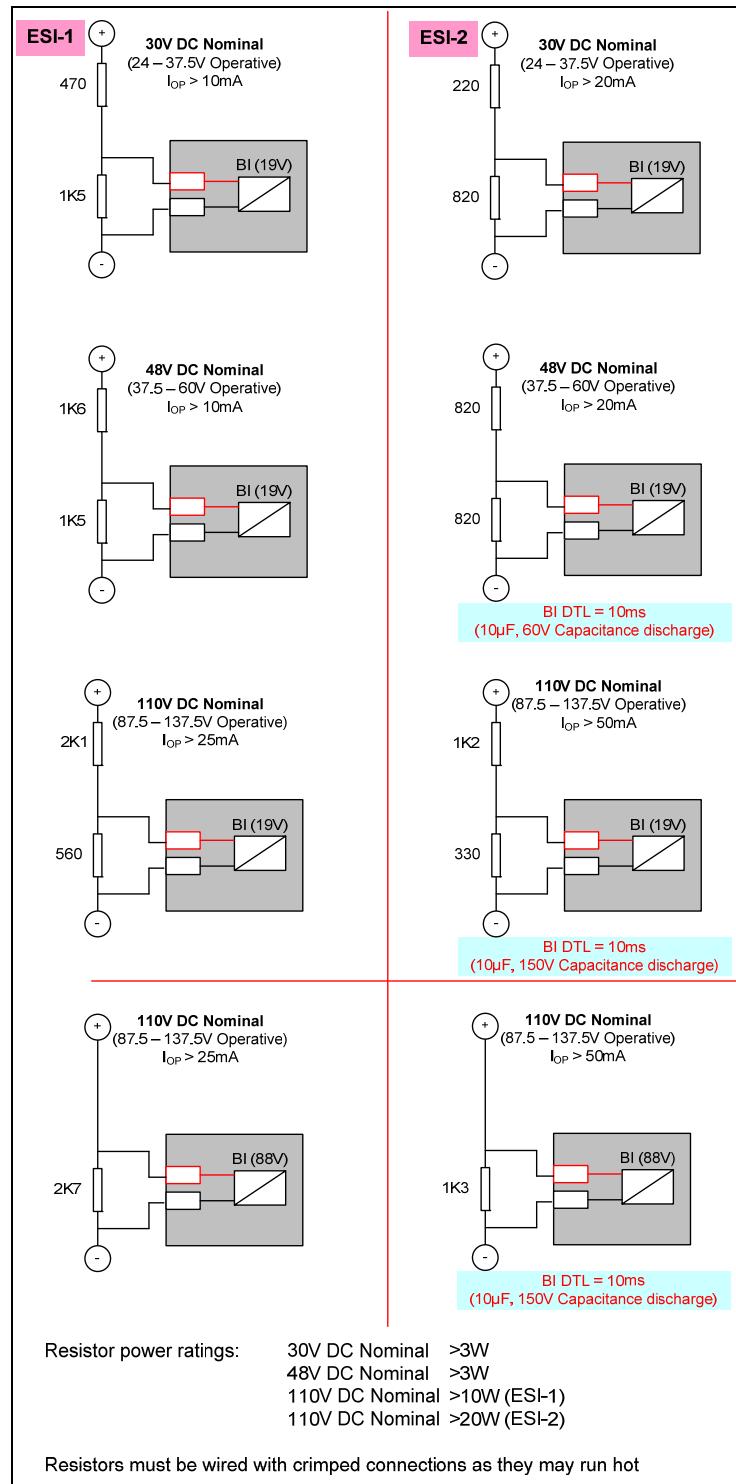

Figure 1.2-1 Binary Input Configurations Providing Compliance with EATS 48-4 Classes ESI 1 and ESI 2

## 1.3 Functional performance

### 1.3.1 Instrumentation

|              | <b>Instrument Value</b>  | <b>Reference</b>                      | <b>Typical accuracy</b>             |
|--------------|--------------------------|---------------------------------------|-------------------------------------|
| I            | Current                  | $I \geq 0.1 xIn$                      | $\pm 1\% In$ or $\pm 5\text{ mA}$   |
| V            | Voltage                  | $V \geq 0.8 xVn$                      | $\pm 1\% Vn$                        |
| W,Var,<br>VA | Power, real and apparent | $V = Vn, I \geq 0.1 xIn, pf \geq 0.8$ | $\pm 3\% Pn$ , where $Pn = Vn x In$ |
| pf           | Power factor             | $V = Vn, I \geq 0.1 xIn, pf \geq 0.8$ | $\pm 0.05$                          |

### 1.3.2 USB 2.0 Data Communication Interface

| <b>Attribute</b> | <b>Value</b> |
|------------------|--------------|
| Physical layer   | Electrical   |
| Connectors       | USB-Type B   |

### 1.3.3 RS485 Data Communication Interface

| <b>Attribute</b> | <b>Value</b>   |
|------------------|----------------|
| Physical layer   | Electrical     |
| Connectors       | 4mm Ring Crimp |

### 1.3.4 Real Time Clock

#### 1.3.4.1 Internal Clock

The specification below applies only while no external synchronisation signal (e.g. 60870-5-103) is being received.

| <b>Attribute</b>        | <b>Value</b>           |
|-------------------------|------------------------|
| Accuracy (-10 to +55°C) | $\pm 3.5\text{ p.p.m}$ |

## 1.4 Current Differential Application Limits

### 1.4.1 Pilot Cable connection

Number of Pilot cores required 2

#### Pilot Requirements

|                             | R Mode            | Rf Mode           | Rf mode with 15kv Transf. |                 |                 |
|-----------------------------|-------------------|-------------------|---------------------------|-----------------|-----------------|
|                             |                   |                   | Tap 1                     | Tap 0.5         | Tap 0.25        |
| Max. Loop Resistance        | 1000 $\Omega$     | 2000 $\Omega$     | 1780 $\Omega$             | 880 $\Omega$    | 440 $\Omega$    |
| Max. Inter core Capacitance | 2.5 $\mu\text{F}$ | 0.8 $\mu\text{F}$ | 1 $\mu\text{F}$           | 2 $\mu\text{F}$ | 4 $\mu\text{F}$ |

#### Pilot Current and Voltage

|  | R Mode | Rf Mode | Rf mode with 15kv Transf. |         |          |
|--|--------|---------|---------------------------|---------|----------|
|  |        |         | Tap 1                     | Tap 0.5 | Tap 0.25 |
| Peak Voltage applied to pilots under fault conditions    | 300v   | 450v    | 450v                      | 330v    | 225v     |
| Maximum current carried by pilots under fault conditions | 200mA  | 250mA   | 250mA                     | 380mA   | 500mA    |

## 1.4.2 Line Charging Current

Maximum Primary Line Capacitive Charging Current:

Solidly Earthed System, 1/3 times the most sensitive earth fault setting  
 Resistance Earthed System, 1/9 times the most sensitive earth fault setting

## 1.5 Environmental Performance

### 1.5.1 General

#### 1.5.1.1 Temperature

IEC 60068-2-1/2

| Type            | Level            |
|-----------------|------------------|
| Operating range | -10 °C to +55 °C |
| Storage range   | -25 °C to +70 °C |

#### 1.5.1.2 Humidity

IEC 60068-2-78

| Type             | Level                                       |
|------------------|---|
| Operational test | 56 days at 40 °C and 93 % relative humidity |

#### 1.5.1.3 Transient Overvoltage

IEC 60255-5

| Type   | Level                  |
|--|------------------------|
| Between all terminals and earth, or between any two independent circuits | 5.0 kV, 1.2/50 µs 0.5j |

#### 1.5.1.4 Insulation

IEC 60255-5

| Type   | Level                   |
|--|-------------------------|
| Between any terminal and earth                                     | 2.5 kV AC RMS for 1 min |
| Between independent circuits                                       |                         |
| Across normally open contacts                                      | 1.0 kV AC RMS for 1 min |
| Between pilot circuit and all other independent circuits and earth | 5.0 kV AC RMS for 1 min |

#### 1.5.1.5 IP Ratings

IEC 60529

| Type                     | Level                             |
|--------------------------|-----------------------------------|
| Installed with cover on  | IP 5X, Category 2- Dust-protected |
| Installed with cover off | IP 4X, 1mm probe                  |

Solkor R/Rf

| Type                         | Level |
|------------------------------|-------|
| Installed with cover on      | IP 51 |
| Installed with cover removed | IP 30 |

## 1.5.2 Emissions

IEC 60255-25

### 1.5.2.1 Radiated Emissions: Enclosure

| Type            | Limits at 10 m, Quasi-peak |
|-----------------|----------------------------|
| 30 to 230 MHz   | 40 dB( $\mu$ V/m)          |
| 230 to 1000 MHz | 47 dB( $\mu$ V/m)          |

### 1.5.2.2 Radiated Emissions: Conducted

| Type            | Limits          |                 |
|-----------------|-----------------|-----------------|
|                 | Quasi-peak      | Average         |
| 0.15 to 0.5 MHz | 79 dB( $\mu$ V) | 66 dB( $\mu$ V) |
| 0.5 to 30 MHz   | 73 dB( $\mu$ V) | 60 dB( $\mu$ V) |

## 1.5.3 Immunity

### 1.5.3.1 Auxiliary DC Supply Variation

IEC 60255-11

| Type of Phenomena                    | Test Specifications | Duration          | Declared Operation   |
|--------------------------------------|---------------------|-------------------|--|
| Voltage Dips                         | 0% RV               | 50ms<br>(Claimed) | Normal Operation <sup>1</sup>  |
|                                      | 40% RV              | 200ms             | Normal operation <sup>1</sup> except where Dip falls below the relay minimum voltage then Relay Restart <sup>2</sup> |
|                                      | 70% RV              | 500ms             | Normal operation <sup>1</sup> except where Dip falls below the relay minimum voltage then Relay Restart <sup>2</sup> |
| Voltage Interruptions                | 0% RV               | 5s                | Relay Reset <sup>2</sup>   |
| Alternating Component In DC (Ripple) | 15% max and min RV  | Continuous        | Normal operation <sup>1</sup>  |
| Gradual Shut-down/<br>Start-up       | Max & min RV to 0V  | 60s               | Relay Reset  |
|                                      | 0V                  | 5minutes          | Relay Off  |
|                                      | 0V to min & max RV  | 60s               | Relay Restart <sup>2</sup>   |
| Reversal of DC Power Supply polarity | Max reversed RV     | 1minute           | Relay remains off<br>After correcting polarity, Relay Restart <sup>2</sup>   |

Key:

RV = Residual Voltage Test Value. Two conditions: (a) range voltage low -20% and

(b) range voltage high +20%

<sup>1</sup> No effect on relay performance

<sup>2</sup> Restart with no mal-operation, loss of data or relay damage

### 1.5.3.2 High Frequency Disturbance

IEC 60255-22-1

| Type                       | Level  |
|----------------------------|--------|
| Common (longitudinal) mode | 2.5 kV |
| Series (transverse) mode   | 1.0 kV |

### 1.5.3.3 Electrostatic Discharge

IEC 60255-22-2 Class 4

| Type              | Level  | Variation |
|-------------------|--------|-----------|
| Contact discharge | 8.0 kV | ≤ 5 %     |

## 1.5.3.4 Radiated Immunity

IEC 60255-22-3

| Type                             | Level        |
|----------------------------------|--------------|
| 80 MHz to 1000 MHz               | Sweep 10 V/m |
| 1.4GHz to 2.7GHz                 | Sweep 10V/m  |
| 80,160,380,450,900,1850,2150 MHz | Spot 10V/m   |

## 1.5.3.5 Fast Transients

IEC 60255-22-4 (2002) Class A

| Type                       | Level |
|----------------------------|-------|
| 5/50 ns 2.5 kHz repetitive | 4kV   |

## 1.5.3.6 Surge Immunity

IEC 60255-22-5

| Type                            | Level                 |
|---------------------------------|-----------------------|
| Between all terminals and earth | 0.5, 1.0, 2.0, 4.0 kV |
| Between Line to Line            | 0.5, 1.0, 2.0 kV      |

## 1.5.3.7 Conducted Radio Frequency Interference

IEC 60255-22-6

| Type           | Level |
|----------------|-------|
| 0.15 to 80 MHz | 10 V  |

## 1.5.3.8 Magnetic Field with Power Frequency

IEC 6100-4-8 Level 5

|                              |      |
|------------------------------|------|
| 100A/m, (0.126mT) continuous | 50Hz |
| 1000A/m, (1.26mT) for 3s     |      |

## 1.5.4 Mechanical

## 1.5.4.1 Vibration (Sinusoidal)

IEC 60255-21-1 Class I

| Type                | Level  | Variation |
|---------------------|--------|-----------|
| Vibration response  | 0.5 gn | ≤ 5 %     |
| Vibration endurance | 1.0 gn |           |

## 1.5.4.2 Shock and Bump

IEC 60255-21-2 Class I

| Type            | Level        | Variation |
|-----------------|--------------|-----------|
| Shock response  | 5 gn, 11 ms  |           |
| Shock withstand | 15 gn, 11 ms | ≤ 5 %     |
| Bump test       | 10 gn, 16 ms |           |

## 1.5.4.3 Seismic

IEC 60255-21-3 Class I

| Type             | Level   | Variation |
|------------------|---|-----------|
| Seismic response | X-plane - 3.5mm displacement below crossover freq (8-9Hz) 1.0gn above | ≤ 5 %     |

| Type | Level  | Variation |
|------|--|-----------|
|      | Y-plane - 1.5mm displacement below crossover freq<br>(8-9Hz) 0.5gn above |           |

## 1.5.4.4 Mechanical Classification

| Type       | Level               |
|------------|---------------------|
| Durability | > $10^6$ operations |

## Section 2: Protection Functions

### 2.1 27/59 Under/over voltage

#### 2.1.1 Reference

|        | Parameter          | Value  |
|--------|--------------------|--|
| $V_s$  | Setting            | 5, 5.5...200V  |
| $hyst$ | Hysteresis setting | 0, 0.1... 80.0%  |
| $t_d$  | Delay setting      | 0.00, 0.01...20.00, 20.50... 100, 101... 1000, 1010... 10000, 10100... 14400 s |

#### 2.1.2 Operate and Reset Level

|          | Attribute     | Value   |
|----------|---------------|---|
| $V_{op}$ | Operate level | 100 % $V_s$ , ± 1 % or ±0.25V                                 |
|          | Reset level   | Overvoltage = $(100 \% - hyst) \times V_{op}$ , ± 1 % ± 0.25V |
|          |               | Undervoltage = $(100 \% + hyst) \times V_{op}$ ± 1 % ± 0.25V  |
|          | Repeatability | ± 1 %   |
|          | Variation     | -10 °C to +55 °C ≤ 5 %  |
|          |               | $f_{nom} - 3$ Hz to $f_{nom} + 2$ Hz ≤ 5 %                    |

#### 2.1.3 Operate and Reset Time

|              | Attribute                    | Value  |
|--------------|------------------------------|--|
| $t_{basicE}$ | Element basic operate time   | Overvoltage 0 to $1.1 \times V_s$ : 73 ms ± 10ms |
|              |                              | 0 to $2.0 \times V_s$ : 63 ms ± 10ms             |
|              | Undervoltage                 | 1.1 to $0.5 \times V_s$ : 58 ms ± 10ms           |
| $t_{op}$     | Operate time following delay | $t_{basic} + t_d$ , ± 1 % or ± 10ms              |
|              | Repeatability                | ± 1 % or ± 10ms                                  |
|              | Disengaging time             | < 80 ms  |

### 2.2 37 Undercurrent

#### 2.2.1 Reference

|       | Parameter     | Value  |
|-------|---------------|--|
| $I_s$ | Setting       | 0.05, 0.10...5.0 x $I_n$   |
| $t_d$ | Delay setting | 0.00, 0.01...20.00, 20.10... 100, 101... 1000, 1010... 10000, 10100... 14400 s |

#### 2.2.2 Operate and Reset Level

|          | Attribute     | Value                                      |
|----------|---------------|--|
| $I_{op}$ | Operate level | 100 % $I_s$ , ± 5 % or ± 1% $I_n$          |
|          | Reset level   | ≤ 105 % $I_{op}$                           |
|          | Repeatability | ± 1 %                                      |
|          | Variation     | -10 °C to +55 °C ≤ 5 %                     |
|          |               | $f_{nom} - 3$ Hz to $f_{nom} + 2$ Hz ≤ 5 % |

### 2.2.3 Operate and Reset Time

|             | Attribute                    | Value  |
|-------------|------------------------------|--|
| $t_{basic}$ | Element basic operate time   | 1.1 to 0.5 x/s: 35 ms, $\pm 10\text{ms}$               |
| $t_{op}$    | Operate time following delay | $t_{basic} + t_d, \pm 1\% \text{ or } \pm 10\text{ms}$ |
|             | Repeatability                | $\pm 1\% \text{ or } \pm 10\text{ms}$                  |

|          | $t_{res}$                            | $t_{res}, \pm 1 \% \text{ or } \pm 20\text{ms}$  |
|          | Repeatability                        | $\pm 1 \% \text{ or } \pm 20\text{ms}$   |
|          | Overshoot time                       | < 40 ms  |
|          | Disengaging time                     | < 50 ms  |

Figure 2.10-1 shows the operate times for the four IEC IDMTL curves with a time multiplier of 1.

Figures 2.10-2 and 2.10-3 show the ANSI operate and reset curves. These operate times apply to non-directional characteristics. Where directional control is applied then the directional element operate time should be added to give total maximum operating time.

## 2.12 51V Voltage Controlled Overcurrent

### 2.12.1 Reference

|       | Parameter  | Value |
|-------|------------|-------|
| $V_s$ | Setting    | 60V   |
| $m$   | multiplier | 0.5   |
| $I_s$ | Setting    | 1xIn  |

### 2.12.2 Operate and Reset Level

|          | Attribute     | Value  |
|----------|---------------|--|
| $V_{op}$ | Operate level | 100 % $V_s$ , $\pm 1\%$ or $\pm 0.25V$   |
|          | Reset level   | $\leq 105\% V_{op}$  |
|          | Repeatability | $\pm 1\%$  |
|          |               | -10 °C to +55 °C $\leq 5\%$  |
|          | Variation     | $f_{nom} - 3\text{ Hz}$ to $f_{nom} + 2\text{ Hz}$<br>harmonics to $f_{cutoff}$ $\leq 5\%$ |

#### Operate and Reset Time

As per Phase Fault Shaped Characteristic Element (ANSI 51).

Where Pickup Level =  $I_s$  for Voltage >  $V_s$

Pickup Level = ( $I_s \times m$ ) for Voltage <  $V_s$

## 2.13 59N Neutral Voltage Displacement

### 2.13.1 Reference (59NDT)

|                | Parameter     | Value  |
|----------------|---------------|--|
| V <sub>s</sub> | Setting       | 0.1 x V <sub>n</sub>   |
| t <sub>d</sub> | Delay setting | 0.00, 0.01...20.00, 20.10... 100, 101... 1000, 1010... 10000, 10100... 14400 s |

### 2.13.2 Operate and Reset Level (59NDT)

|                 | Attribute  | Value                                   |
|-----------------|--|---|
| V <sub>op</sub> | Operate level                                      | 100 % V <sub>s</sub> , ± 2 % or ± 0.5 V |
|                 | Reset level  | ≥ 95 % V <sub>op</sub> or ± 0.5 V       |
|                 | Repeatability                                      | ± 1 %                                   |
| Variation       | -10 °C to +55 °C                                   | ≤ 5 %                                   |
|                 | f <sub>nom</sub> - 3 Hz to f <sub>nom</sub> + 2 Hz | ≤ 5 %                                   |

### 2.13.3 Operate and Reset Time (59NDT)

|                    | Attribute                    | Value   |
|--------------------|------------------------------|---|
| t <sub>basic</sub> | Element basic operate time   | 0V to 1.5 xV <sub>s</sub> , 76 ms, ± 20ms             |
|                    |                              | 0V to 10 xV <sub>s</sub> , 63 ms, ± 20ms              |
| t <sub>op</sub>    | Operate time following delay | t <sub>basic</sub> + t <sub>d</sub> , ± 1 % or ± 20ms |
|                    | Repeatability                | ± 1 % or ± 20ms                                       |
|                    | Overshoot time               | < 40 ms   |
|                    | Disengaging time             | <100 ms   |

### 2.13.4 Reference (59NIT)

|                  | Parameter                                   | Value              |
|------------------|---|--------------------|
| M                | Multiplier setting                          | 1                  |
| V <sub>s</sub>   | Setting                                     | 1, 1.5... 100V     |
| 3V <sub>o</sub>  | Applied Current (for Operate-Time)<br>IDMTL | 2 x V <sub>s</sub> |
| t <sub>d</sub>   | Delay setting                               | 0, 0.01... 20 s    |
| t <sub>res</sub> | Reset setting                               | 0, 1...60 s        |

### 2.13.5 Operate and Reset Level (59NIT)

|                 | Attribute  | Value                                   |
|-----------------|--|---|
| V <sub>op</sub> | Operate level                                      | 105 % V <sub>s</sub> , ± 2 % or ± 0.5 V |
|                 | Reset level  | ≥ 95 % V <sub>op</sub> or ± 0.5 V       |
|                 | Repeatability                                      | ± 1 %                                   |
| Variation       | -10 °C to +55 °C                                   | ≤ 5 %                                   |

### 2.13.6 Operate and Reset Time (59NIT)

|             | <b>Attribute</b>                          | <b>Value</b>  |  |
|-------------|---|---------------|--|
| $t_{basic}$ | Starter operate time                      |               | 65 ms, $\pm 20\text{ms}$   |
| $3V_o$      | Applied Current (for Operate-Time)<br>DTL |               | $10 \times V_s$  |
| $t_{op}$    | Operate time                              | char = IDM TL | $t_{op} = \frac{M}{\left[ \frac{3V_0}{V_s} \right] - 1}, \pm 5 \% \text{ or } \pm 65 \text{ ms}$ |
|             |   | char = DTL    | $t_d, \pm 1 \% \text{ or } \pm 40\text{ms}$  |
|             | Reset Time                                | char = IDM TL | $t_{res}, \pm 5 \% \text{ or } \pm 65\text{ms}$  |
|             |   | char = DTL    | $t_{res}, \pm 1 \% \text{ or } \pm 40\text{ms}$  |
|             | Repeatability                             |               | $\pm 1 \% \text{ or } \pm 20\text{ms}$   |
|             | Overshoot time                            |               | < 40 ms  |
|             | Disengaging time                          |               | < 100 ms   |

## 2.14 64H Restricted Earth Fault Protection

### 2.14.1 Reference

|       | Parameter     | Value  |
|-------|---------------|--|
| $I_s$ | Setting       | 0.05, 0.055... 0.95 $\times I_n$   |
| $t_d$ | Delay setting | 0.00, 0.01...20.00, 20.10... 100, 101... 1000, 1010... 10000, 10100... 14400 s |

### 2.14.2 Operate and Reset Level

|          | Attribute                                | Value   |
|----------|--|---|
| $I_{op}$ | Operate level                            | 100 % $I_s$ , $\pm 5\%$ or $\pm 1\% \times I_n$     |
|          | Reset level                              | 95 % $I_{op}$ , $\pm 5\%$ or $\pm 0.1\% \times I_n$ |
|          | Repeatability                            | $\pm 1\%$   |
|          | Transient overreach<br>(X/R $\leq 100$ ) | $\leq -5\%$   |
|          | Variation                                | -10 °C to +55 °C                                    |
|          |  | $f_{nom} - 3\text{ Hz}$ to $f_{nom} + 2\text{ Hz}$  |
|          |  | $\leq 5\%$  |

### 2.14.3 Operate and Reset Time

|             | Attribute                    | Value  |
|-------------|------------------------------|--|
| $t_{basic}$ | Element basic operate time   | 0 to 2 $\times I_s$ , 45 ms, $\pm 10\text{ms}$     |
|             |                              | 0 to 5 $\times I_s$ , 35 ms, $\pm 10\text{ms}$     |
| $t_{op}$    | Operate time following delay | $t_{basic} + t_d$ , $\pm 1\%$ or $\pm 10\text{ms}$ |
|             | Repeatability                | $\pm 1\%$ or $\pm 10\text{ms}$                     |
|             | Overshoot time               | < 40 ms  |
|             | Disengaging time             | < 50 ms  |

## 2.15 67/67N Directional Overcurrent & Earth Fault

### 2.15.1 Reference

|            | Parameter       | Value                                  |
|------------|-----------------|--|
| $\theta_s$ | Angle setting   | -95...+95 °                            |
| $I$        | Applied current | $I_n$                                  |
| $V$        | Applied voltage | 110 V phase-phase (63.5 V phase-earth) |

### 2.15.2 Operate Angle

|                                   | Attribute  | Value  |
|-----------------------------------|--|--|
| CA                                | Characteristic angle ( $I$ with respect to $V$ ) | $\theta_s, \pm 5$ °                                |
| Operating angle                   | forward  | CA - 85 ° ± 5 ° to CA + 85 ° ± 5 °                 |
|                                   | reverse  | (CA - 180°) - 85° ± 5 ° to (CA - 180°) + 85° ± 5 ° |
| Variation in characteristic angle | 10°C to +55°C                                    | ± 5 °  |
|                                   | $f_{nom}$ - 3 Hz to $f_{nom}$ + 2 Hz             | ± 5 °  |

### 2.15.3 Operate Threshold

|                              | Attribute | Value        |
|------------------------------|-----------|--------------|
| Minimum levels for operation | $I$ (p/f) | > 5 % $I_n$  |
|                              | $I$ (e/f) | > 10 % $I_n$ |
|                              | $V$ (p/f) | > 1 V        |
|                              | $V$ (e/f) | > 1 V        |

### 2.15.4 Operate and Reset Time

|  | Attribute    | Value   |
|--|--------------|---|
|  | Operate time | typically 32 < 40 ms at characteristic angle + element operate time |
|  | Reset time   | typically < 65 ms at characteristic angle                           |

## 2.16 87L Pilot Wire Current Differential

### 2.16.1 Operate Level

The following sensitivities are shown as a percentage of rated current and are directly applicable to the local relay of a connected pair when subjected to current injection at the local end only. Settings are typically within +/-15% of quoted sensitivity.

| Type of fault | Fault settings (% In)          |       |         |       |                             |       |         |       |
|---------------|--------------------------------|-------|---------|-------|-----------------------------|-------|---------|-------|
|               | Without isolating transformers |       |         |       | With isolating transformers |       |         |       |
|               | R Mode                         |       | Rf Mode |       | R Mode                      |       | Rf Mode |       |
|               | N1 tap                         | N tap | N1 tap  | N tap | N1 tap                      | N tap | N1 tap  | N tap |
| a-n           | 16                             | 22    | 18      | 25    | 22                          | 31    | 25      | 35    |
| b-n           | 18                             | 27.5  | 21      | 32    | 26                          | 39    | 30      | 44    |
| c-n           | 22                             | 37    | 25      | 42    | 31                          | 52    | 35      | 59    |
| a-b           | 110                            |       | 125     |       | 155                         |       | 177     |       |
| b-c           | 110                            |       | 125     |       | 155                         |       | 177     |       |
| c-a           | 55                             |       | 62      |       | 77.5                        |       | 88.5    |       |
| a-b-c         | 63                             |       | 72      |       | 89                          |       | 101     |       |

If Pilot Supervision is fitted, the settings will be increased by 20-50%.

In Rf mode the remote end relay will operate at a similar level to the local relay.

In R mode the remote end will typically operate at 2.5 times the local end setting.

## 2.16.2 Operate Time

|               | Attribute                          | Mode         | 3x fault setting | 5x fault setting | 10x fault setting |
|---------------|------------------------------------|--------------|------------------|------------------|-------------------|
| $t_{RfBasic}$ | Element typical basic operate time | R Mode       | 60ms             |                  | 45ms              |
|               |                                    | 5kV Rf mode  |                  | 45ms             |                   |
|               |                                    | 15kV Rf mode |                  | 40ms             |                   |

## 2.16.3 Stability Level

|                 | Parameter                             | Value  |
|-----------------|---------------------------------------|--------|
| $I_{StabLimit}$ | Maximum Through fault Stability Level | 50x In |

## Section 3: Supervision Functions

### 3.1 46BC Broken Conductor

#### 3.1.1 Reference

|       | Parameter        | Value   |
