Change in Packing Material at SPDL**

REYROLLE

Please be aware that a change has been made to the packing material used to transport Relays manufactured by SPDL.

The previous end-caps, manufactured from EPS, are non-biodegradable and so both harmful to the environment and difficult to dispose of. For this reason, from 1 November 2011, these end-caps will be manufactured from a recycled paper-pulp.

The new end-caps will be of a comparable strength to the previous packing, yet can be disposed of through normal waste channels.

This change is therefore of significant benefit both to SIEMENS' Customers and to the environment.

With kind regards,

IC SG EA SPDL
