Remarks

- **Setting the switching points:**
  Point the sensor towards the object.
  Q1: Hold teach button 1 down for approx. 2 s,
  Q2: Hold teach button 2 down for approx. 2 s, release each when the LED starts flashing, teach in of switching point complete.
  Q3: Hold teach button 1 down for approx. 12 s, release when the LED starts fast flashing, teach in of switching point complete.
  The object has been detected when the respective Q1/Q2 indicator lights up. There is no LED for Q3.
- **Reserve:** For the reliable detection of objects with low reflectance, a reserve is automatically added during the teach event. This is constant over the entire teach range.
  Object is detected: distance to sensor ≤ teach point + reserve
- **Hysteresis:** To ensure continuous object detection in the switching point, the sensor has a switch-off hysteresis. Object is no longer detected if: distance to sensor > teach point + reserve + hysteresis.
- **Factory setting:**
  reserve: approx. 50 mm
  hysteresis: approx. 50 mm
- With the set scanning range, a tolerance of the upper scanning range limit is possible depending on the reflection properties of the material surface.
- **Scanning range/reflectivity:**

Object/ diffuse reflection	
6 … 90 %	0.15 … 6 m (standard)

- **Laser warning signs:**
  It is important to attach the stick-on labels delivered with the device! If the signs could be covered due to the installation location of the device, attach them close to the device so that it is not possible to look into the laser beam when reading the notices.
