Device information - main menu

This menu item contains detailed information on
• Device model,
• Manufacturer,
• Software and hardware version,
• Serial number.
No entries can be made via the display.

Network information - main menu

Explanations of address, baud rate, status.
No entries can be made via the display.

Status- and measurement data - main menu

• Display of status-, warning-, and error messages.
• Status overview of the switching inputs/outputs.
• Bar graph for the reception level.
• Activated interface.
• Measurement value.
No entries can be made via the display.
See "Indicators in the display" on page 37.

Parameter - main menu

• Configuration of the AMS.
See "Parameter menu" on page 42.

Language selection - main menu

• Selection of the display language.
See "Language selection menu" on page 46.

Service - main menu

• Display of status messages.
• Display of diagnostic data.
No entries can be made via the display.
See "Service menu" on page 47.

1   General information

1.1   Explanation of symbols

The symbols used in this operating manual are explained below.

⚠ *Attention!*

This symbol precedes text messages which must strictly be observed. Failure to comply with this information results in injuries to personnel or damage to the equipment.

Attention Laser!

This symbol warns of possible danger caused by hazardous laser radiation.

○ *Notice!*

This symbol indicates text passages containing important information.

1.2   Declaration of conformity

The AMS 335*i* absolute measuring optical laser measurement system was designed and manufactured in accordance with applicable European directives and standards.

The AMS series is "UL LISTED" according to American and Canadian safety standards and fulfills the requirements of Underwriter Laboratories Inc. (UL).

○ *Notice!*

The Declaration of Conformity for these devices can be requested from the manufacturer.

The manufacturer of the product, Leuze electronic GmbH + Co. KG in D-73277 Owen/Teck, possesses a certified quality assurance system in accordance with ISO 9001.

$C\epsilon$ ISO 9001   c(UL)us LISTED

1.3   Description of functions AMS 335*i*

The AMS 335*i* optical laser measurement system calculates distances to fixed as well as moving system parts. The distance to be measured is calculated according to the principle of the propagation time of radiated light. Here, the light emitted by the laser diode is reflected by a reflector onto the receiving element of the laser measurement system. The AMS 335*i* uses the "propagation time" of the light to calculate the distance to the reflector. The high absolute measurement accuracy of the laser measurement system and the fast integration time are designed for position control applications.

With the AMS 3xx*i* product series, Leuze electronic makes available a range of internation- ally relevant interfaces. Note that each interface version listed below corresponds to a different AMS 3xx*i* model.

PROFI BUS	SSI	**AMS 304*i***
PROFI NET		**AMS 348*i***
DeviceNet		**AMS 355*i***
EtherNet/IP		**AMS 358*i***
CANopen		**AMS 335*i***
EtherCAT		**AMS 338*i***
Ethernet		**AMS 308*i***
INTERBUS		**AMS 384*i***
RS485		**AMS 301*i***
RS232	RS422	**AMS 300*i***

2 Safety notices

2.1 General safety notices

Documentation

All entries in this technical description must be heeded, in particular those in section "Safety notices". Keep this technical description in a safe place. It should be available at all times.

Safety regulations

Observe the locally applicable legal regulations and the rules of the employer's liability insurance association.

Repair

Repairs must only be carried out by the manufacturer or an authorized representative.

2.2 Safety standards

The devices of the series AMS 335*i* were developed, manufactured and tested in accordance with the applicable safety standards. They correspond to the state of the art.

2.3 Intended use

The AMS 335*i*… device series is an absolute measuring system based on laser technology. The devices use a visible optical laser to measure distances of up to 300 m contactlessly. The laser is designed so that distance measurements are made against a reflector.

Attention!

The protection of personnel and the device is guaranteed only if the device is operated in a manner corresponding to its intended use.

Areas of application

The AMS 335*i*… is suitable for the following areas of application:
- Distance measurements for determining the position of automated, moving plant components such as:
  - Travel and lifting axes of high-bay storage devices
  - Gantry crane bridges and their trolleys
  - Repositioning units
  - Lifts
  - Electroplating plants

2.4   Working safely

Attention!

Access to or changes on the device, except where expressly described in this operating manual, are not authorized.
The device must not be opened. Failure to comply will render the guarantee void. Warranted features cannot be guaranteed after the device has been opened.

Safety regulations

Observe the locally applicable legal regulations and the rules of the employer's liability insurance association.

Attention!

The AMS 335i… is not a safety module acc. to EU machinery directives.

Qualified personnel

Mounting, commissioning and maintenance of the device must only be carried out by qualified personnel. Electrical work must be carried out by a certified electrician.

Attention, laser radiation!

The AMS 335i operates with a red light laser of class 2 acc. to EN 60825-1. If you look into the beam path over a longer time period, the retina of your eye may be damaged!

Never look directly into the beam path!

Do not point the laser beam of the AMS 335i at persons!

When mounting and aligning the AMS 335i, avoid reflections of the laser beam off of reflective surfaces!

Heed the laser safety regulations according to DIN EN 60825-1 in their most current version! The output power of the laser beam at the reading window is at most 4.0mW acc. to EN 60825-1. The average laser power is less than 1mW in accordance with laser class 2 as well as CDRH class 2.

The AMS 335i uses a laser diode with low power in the visible red light range with an emitted wavelength of 650 … 690nm.

Attention!

CAUTION! The use of operating and adjusting devices other than those specified here or carrying out of differing procedures may lead to dangerous exposure to radiation.

The housing of the AMS 335*i* has been provided with the following labeling:

LASER LIGHT
DO NOT STARE INTO BEAM

Maximum Output: 4mW
Puls duration: 18us
Wavelength: 655nm

CLASS 2 LASER PRODUCT
EN 60825-1:2007 (IEC 60825-1:2007)
Complies with 21 CFR 1040.10

LASERSTRAHLUNG
NICHT IN DEN STRAHL BLICKEN

Max. Leistung: 4mW
Pulsdauer: 18µs
Wellenlänge: 655nm

LASER KLASSE 2
DIN EN 60825-1:2008-05

A   Hazard warning & logotype

B   Warning and certification plate

C   Name plate with part no., version no., date of manufacture and serial no.
For EtherNet-based devices, the MAC ID is specified on the name plate.
Please note that the shown name plate is for illustration purposes only; the contents do not correspond to the original.

Figure 2.1:   Location of the name plate on the AMS 335*i*

3 Fast commissioning / operating principle

◯ *Notice!*
Ⓘ *Below, you will find a **short description for the initial commissioning** of the AMS 335i.*
Detailed explanations for the listed points can be found throughout the handbook.

3.1 Mounting the AMS 335i

The AMS 335i and the corresponding reflector are mounted on two mutually opposing, plane-parallel, flat walls.

Figure 3.1:   Schematic illustration of mounting

⚠ *Attention!*
For error-free position measurement, there must be an unobstructed line-of-sight between the AMS 335i and the reflector.

3.1.1 Mounting the device

The laser is mounted using 4 screws (M5).

Alignment is performed using 2 adjustment screws. Adjust so that the laser light spot is positioned at the center of the reflector. The alignment is to be secured with the knurled nut and locked with the M5 nut.

Further information can be found in chapter 5.2 and chapter 5.3.

3.1.2 Mounting the reflector

The reflector is mounted using 4 screws (M5). The reflector is angled using the spacer sleeves included. Incline the reflector by approx. 1°.

Detailed information can be found in chapter 6.4.

3.2 Connecting the voltage supply

The laser measurement system is connected using M12 connectors. The voltage supply is connected via the PWR M12 connection.

Detailed information can be found in chapter 7.

3.3 Display

Once the laser measurement system is supplied with voltage, the device status as well as the measured position values can be read on the display. The display automatically switches to the display of the measurement values.

Use the up/down buttons (▲) (▼) to the left of the display to read and change a wide range of data and parameters.

Depending on connected interface, the network address must be configured via the display.

Detailed information can be found in chapter 8.

3.4 AMS 335*i* on the CANopen

Install the EDS file corresponding to the AMS 335*i* … in your planning tool/the control (e.g., TwinCAT).

○   *Notice!*

    You can find the EDS file at:
    www.leuze.com -> Download -> identify -> Optical distance measuring and position-ing.

The AMS 335*i* is configured in the planning tool/control by means of the EDS file. If the AMS 335*i* has been assigned an address in the planning tool, the address (Node ID) is to be set on the AMS 335*i* via the control panel/display. Only if the addresses are the same between the AMS 335*i* and the control can communication be established.

After all parameters have been set in the planning tool/control, the download to the AMS 335*i* takes place. The set parameters are now stored on the AMS 335*i*.

Afterwards, all changed AMS 335*i* parameters should be stored in the control upon start-up. This aids in retaining the parameters during device exchanges, as they a re now also stored centrally in the control.

Each time a connection is established between the control and the AMS 335*i*, these param-eters are now transferred again to the AMS 335*i*. Note that this function must be supported by the control.

The CANopen baud rate is defined for the entire network in the planning tool/control.

The baud rate is set on the AMS 335*i* via the control panel/display.

Only if the baud rates are the same is communication with the AMS 335*i* possible.

Detailed information can be found in chapter 9.

4 Specifications

4.1 Specifications of the laser measurement system

4.1.1 General specifications AMS 335*i*

Measurement data	AMS 335*i* 40 (H)	AMS 335*i* 120 (H)	AMS 335*i* 200 (H)	AMS 335*i* 300 (H)
Measurement range	0.2 … 40 m	0.2 … 120 m	0.2 … 200 m	0.2 … 300 m
Accuracy	± 2 mm	± 2 mm	± 3 mm	± 5 mm
Consistency [1]	0.3 mm	0.5 mm	0.7 mm	1.0 mm
Light spot diameter	≤ 40 mm	≤ 100 mm	≤ 150 mm	≤ 225 mm
Measurement value output		1.7 ms		
Integration time		8 ms		
Resolution		adjustable, see chapter of the individual interfaces		
Temperature drift		≤ 0.1 mm/K		
Ambient temperature sensitivity		1 ppm/K		
Air pressure sensitivity		0.3 ppm/hPa		
Traverse rate		≤ 10 m/s		

Electrical data				
Supply voltage Vin [2]		18 … 30 VDC		
Current consumption		without device heating: ≤ 250 mA / 24 VDC		
		with device heating: ≤ 500 mA / 24 VDC		

Optical data				
Transmitter		laser diode, red light, wavelength 650 … 690 nm		
Laser class		2 acc. to EN 60825-1, CDRH		
Laser life expectancy [3]		average temperature / year	50 °C: 23.000 h	
			25 °C: 60.000 h	
			20 °C: 75.000 h	
			10 °C: 120.000 h	

Interfaces				
CANopen (baud rate in kbit/s)		20 / 50 / 125 (default) / 250 / 500 / 800 / 1000		
Vendor ID		0x121$_H$ or 289 $_{Dec}$		
Device type		0x00080196 (absolute linear encoder)		

Operating and display elements

Keyboard	4 buttons
Display	monochromatic graphical display, 128 x 64 pixels
LED	2 LEDs, two-colored
Inputs/outputs	
Quantity	2, programmable
Input	protected against polarity reversal
Output	max. 60 mA, short-circuit proof

Mechanical data

Housing	cast zinc and aluminum
Optics	glass
Weight	approx. 2.45 kg
Protection class	IP 65 acc. to EN 60529 [4]

Environmental conditions

Operating temperature	
without device heating	-5°C … +50°C
with device heating	-30°C … +50°C [5]
Storage temperature	-30°C … +70°C
Air humidity	max. 90% rel. humidity, non-condensing

Mechanical/electrical loading capacity

Vibrations	acc. to EN 60068-2-6
Noise	acc. to EN 60060-2-64
Shock	acc. to EN 60068-2-27
EMC	acc. to EN 61000-6-2 and EN 61000-6-4 [6]

1) Statistical error: 1 sigma; minimum switch-on time: 2 min.
2) For UL applications: only for use in "Class 2" circuits acc. to NEC.
3) Switching off the laser diode during system downtime can considerably extend the life expectancy of the device. The laser life expectancy is calculated using a failure rate of 1%.
4) With screwed-on M12 plugs or mounted caps.
5) With devices with heating, the switch on/off area of the internal heating can be extended to prevent condensation from forming. A 100% prevention of the formation of condensation cannot be guaranteed due to the limited heating capacity of the AMS 335*i*.
6) This is a Class A product. In a domestic environment this product may cause radio interference, in which case the operator may be required to take adequate measures.

Table 4.1: Type overview AMS 335*i*

5 Installation and mounting

5.1 Storage, transportation

⚠️ *Attention!*
When transporting or storing, package the device so that it is protected against collision and humidity. Optimum protection is achieved when using the original packaging. Heed the required environmental conditions specified in the technical data.

Unpacking

↳ *Check the packaging for any damage. If damage is found, notify the post office or shipping agent as well as the supplier.*

↳ *Check the delivery contents using your order and the delivery papers:*
- Delivered quantity
- Device type and model as indicated on the nameplate
- Brief manual

The name plate provides information as to what AMS 335*i* type your device is. For specific information, please refer to chapter 11.1.1.

Name plates

Figure 5.1:   Device name plate using the AMS 300*i* as an example

○
ℹ️ *Notice!*
Please note that the shown name plate is for illustration purposes only; the contents do not correspond to the original.

↳ *Save the original packaging for later storage or shipping.*

If you have any questions concerning your shipment, please contact your supplier or your local Leuze electronic sales office.

↳ *Observe the applicable local regulations when disposing of the packaging materials.*

5.2   Mounting the AMS 335*i*

A	M5 screw for alignment
B	Knurled nut and nut with WAF 4 hexagon socket for securing
C	Optical axis
Figure 5.2:   Mounting the device

The AMS 335*i* and the corresponding reflector are mounted on two mutually opposing, plane-parallel, flat walls or system parts. For error-free position measurement, there must be an unobstructed line-of-sight connection between the AMS 335*i* and the reflector.

Use M5 screws to fasten the laser measurement system. Secure the screws with a toothed lock washer to protect against loosening caused by vibrations.

Aligning the laser light spot in the center of the reflector

The laser light spot has to be aligned so that it always hits the center of the opposing reflector, both at close range as well as at the maximum measurement distance. **To align, use the two M5 Allen screws** ("**A**" in figure 5.2). When aligning please ensure that the knurled nut and the lock nut ("**B**" in figure 5.2) are opened wide.

⚠ *Attention!*

To prevent the laser measurement system from moving out of alignment during continuous operation, subsequently hand-tighten the knurled nut and counterlock with the nut with WAF4 hexagon socket ("B" in figure 5.2). Knurled nut and nut must not be tightened until alignment has been completed.

⚠ *Attention!*

The device must not be opened. Failure to comply will render the guarantee void. Warranted features cannot be guaranteed after the device has been opened.

5.2.1 Optional mounting bracket

A mounting bracket for mounting the AMS 335*i* on a flat, horizontal surface is available as an optional accessory.

Type designation: MW OMS/AMS 01

Part no.:   50107255

A   Laser beam
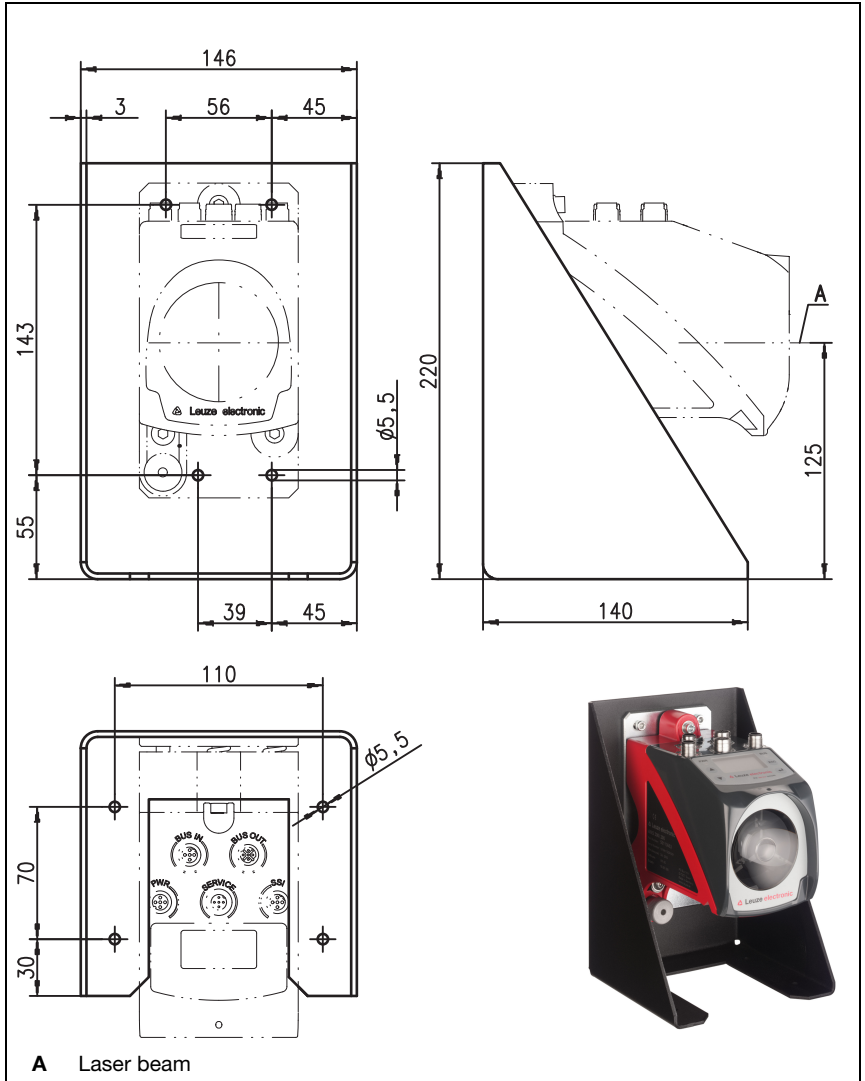

Figure 5.3:   Optional mounting bracket

5.2.2   Mounting distances

Minimum parallel spacing between adjacent AMS 335i

The smallest-possible parallel spacing between adjacent AMS 335*i* is determined by the maximum measured distance as well as by the properties of the reflector. To prevent adjacent devices from interfering with each other the parallel distance of the laser light spots on the reflector is crucial.
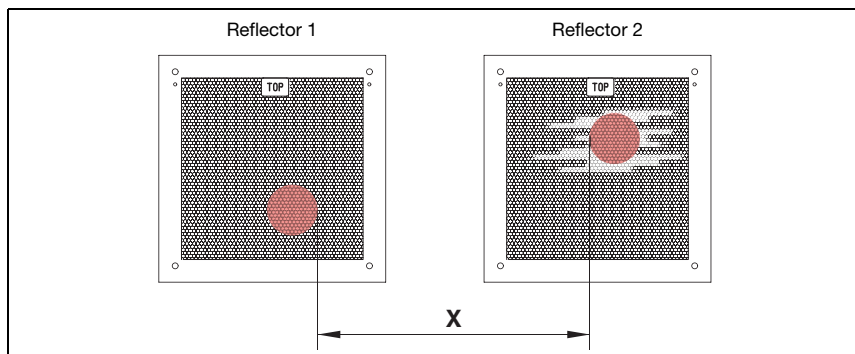

Figure 5.4:   Minimum parallel spacing X between adjacent AMS 335*i*

Min. parallel spacing of laser light spot X = 100mm + (max. measurement distance in mm x 0.01).

Notice!

Please note that travel tolerances could cause the two laser light spots to move towards each other.

If both AMS 335i are optically separated from one another, e.g., if installed in different shelf alleys, the parallel spacing can be selected smaller, as there is no mutual interference in this case.

Minimum distance to an adjacent DDLS 200 optical data transmission device

The optical data transceivers of the DDLS 200 series and the AMS 335*i* do not mutually interfere with one another. Depending on the size of the used reflector, the optical data transceiver can be mounted with a minimum mounting spacing of 100mm to the AMS 335*i*. The mounting spacing is independent of the distance.

5.3   Mounting the AMS 335*i* with laser beam deflector unit

General information

The two available deflector units are used for the 90° deflection of the laser beam, see "Accessory deflector unit" on page 90.

⚠️ ***Attention!***

The deflector units are designed for a maximum range of 40 m.
Longer distances on request.

5.3.1   Mounting the laser beam deflector unit With integrated mounting bracket

The AMS 335*i* is screwed onto the mechanism of the US AMS 01 deflector unit. The mirror can be mounted for three deflection directions:

1.   Upward beam deflection
2.   Beam deflection to the left
3.   Beam deflection to the right

The deflector unit is mounted on plane-parallel, flat walls or plant components. For error-free position measurement, there must be an interruption-free line-of-sight between the AMS 335*i*… and the deflection mirror as well as between the mirror and the reflector.

Use the M5 screws to mount the deflector unit. Secure the screws with a toothed lock washer to protect against loosening caused by vibrations.
Figure 5.5:   Mounting variants of the US AMS 01 laser beam deflector unit

5.3.2   Dimensioned drawing of US AMS 01 deflector unit

A   Laser beam

Figure 5.6:   Dimensioned drawing of US AMS 01 deflector unit

5.3.3   Mounting the US 1 OMS deflector unit without mounting bracket

The US 1 OMS deflector unit and the AMS 335*i* are mounted separately.

○ *Notice!*
⊓ *When mounting, make certain that the laser light spot of the AMS 335**i** is aligned in the center of the deflection mirror.*
Figure 5.7:   Photo and dimensioned drawing of the US 1 OMS deflector unit

Alignment of the laser light spot on the reflector is performed as described in chapter 5.2.

6 Reflectors

6.1 General information

The AMS 335*i* measures distances against a reflective tape specified by Leuze electronic. All provided specifications for the AMS 335*i*, such as the operating range or accuracy, can only be achieved with the reflective tape specified by Leuze electronic.

The reflective tapes are available as adhesive tapes, affixed to a metal plate and with an integrated heater especially for use at low temperatures. Reflective tapes with heating have the designation "**Reflective tape …x…-H**", where "**H**" is an abbreviation for the heating variant.

The reflective tapes/reflectors must be ordered separately. The choice of size is left to the user. In chapter 6.3, recommendations on reflector size are provided as a function of the distance that is to be measured. In any case, the user must check to determine whether the recommendation is suitable for the respective application.

6.2 Description of the reflective tape

The reflective tape consists of a white, microprism-based reflective material. The microprisms are protected with a highly transparent, hard protective layer.

Under certain circumstances, the protective layer may lead to surface reflections. The surface reflections can be directed past the AMS 335*i* by positioning the reflective tape at a slight incline. The inclination of the reflective tape/reflectors is described in chapter 6.4.2. The required pitch can be found in table 6.1 "Reflector pitch resulting from spacer sleeves" on page 33.

The reflective tapes are provided with a protective foil that can easily be pulled off. This must be removed from the reflector before the complete system is put into operation.

6.2.1   Specifications of the self-adhesive foil

	Part		
Type designation	Reflective tape 200x200-S	Reflective tape 500x500-S	Reflective tape 914x914-S
Part no.	50104361	50104362	50108988
Foil size	200x200 mm	500x500 mm	914x914 mm
Recommended application temperature for adhesive tape	+5°C … +25°C		
Temperature resistance, affixed	-40°C … +80°C		
Mounting surface	The mounting surface must be clean, dry and free of grease.		
Cutting the tape	Cut with a sharp tool, always on the side of the prism structure.		
Cleaning	Do not use any agents that act with a grinding effect. A conventional household detergent can be used as a cleaning agent. Rinse with clear water and dry the surface.		
Storing the foil	Store in a cool and dry place.		

6.2.2   Specifications of the reflective tape on a metal plate

The reflective tape is affixed to a metal plate. Included with the metal plate are spacers for positioning at an incline - for avoiding surface reflections - (see chapter 6.4.2 "Mounting the reflector").

	Part		
Type designation	Reflective tape 200x200-M	Reflective tape 500x500-M	Reflective tape 914x914-M
Part no.	50104364	50104365	50104366
Foil size	200x200 mm	500x500 mm	914x914 mm
Outer dimensions of the metal plate	250x250 mm	550x550 mm	964x964 mm
Weight	0.8 kg	4 kg	25 kg
Cleaning	Do not use any agents that act with a grinding effect. A conventional household detergent can be used as a cleaning agent. Rinse with clear water and dry the surface.		
Storing the reflector	Store in a cool and dry place.		

6.2.3   Dimensioned drawing of reflective tape on a metal plate

Always align the **TOP** marking with the AMS connections! (chapter 6.4.2)
Figure 6.1:   Dimensioned drawing of reflectors

Part	Reflective tape (mm)		Reflector plate (mm)		
	xL	**yL**	**XL**	**YL**	**L**
Reflective tape 200x200-M	200	200	250	250	214
Reflective tape 500x500-M	500	500	550	550	514
Reflective tape 914x914-M	914	914	964	964	928

6.2.4   Specifications of heated reflectors

The reflective tape is affixed to a heated, thermally insulated base. The insulation results in a very high energetic efficiency.

Only the reflective tape is kept at the specified temperature by the integrated heater. Through the insulation on the back, the generated heat cannot be transferred via the steel construction. Energy costs are greatly reduced in the case of continuous heating.

Type designation	Part		
	Reflective tape 200x200-H	**Reflective tape 500x500-H**	**Reflective tape 914x914-H**
Part no.	50115020	50115021	50115022
Voltage supply	230 VAC		
Power	100 W	150 W	500 W
Current consumption	~ 0.5 A	~ 1 A	~ 2.5 A
Length of the supply line	2 m		
Size of the reflective tape	200 x 200 mm	500 x 500 mm	914 x 914 mm
Outer dimensions of the base material	250 x 250 mm	550 x 550 mm	964 x 964 mm
Weight	0.5 kg	2.5 kg	12 kg
Temperature control	Controlled heating with the following switch-on and switch-off temperatures, measured at the reflector surface.		
Switch-on temperature	~ 5 °C		
Switch-off temperature	~ 20 °C		
Operating temperature	-30 °C … +70 °C		
Storage temperature	-40 °C … +80 °C		
Air humidity	Max. 90%, non-condensing.		
Cleaning	Do not use any agents that act with a grinding effect. A conventional household detergent can be used as a cleaning agent. Rinse with clear water and dry the surface.		
Storing the reflector	Store in a cool and dry place.		

6.2.5   Dimensioned drawing of heated reflectors

Figure 6.2:   Dimensioned drawing of heated reflectors

Part	Reflective tape (mm)		Insulated base plate (mm)		
	xL	yL	XL	YL	L
Reflective tape 200x200-H	200	200	250	250	214
Reflective tape 500x500-H	500	500	550	550	514
Reflective tape 914x914-H	914	914	964	964	928

6.3   Selecting reflector sizes

Depending on system design, the reflector can be mounted so that it travels on the vehicle or it can be mounted at a fixed location.

⚠️ *Attention!*

The reflector sizes shown below are a recommendation from Leuze electronic for on-vehicle mounting of the AMS 335i. For stationary mounting of the AMS 335i, a smaller reflector is generally sufficient for all measurement distances.

On the basis of the system planning and design, always check whether mechanical travel tolerances may require the use of a reflector larger than that which is recommended. This applies, in particular, when the laser measurement system is mounted on a vehicle. During travel, the laser beam must reach the reflector without interruption. For on-vehicle mounting of the AMS 335i, the reflector size must accommodate any travel tolerances that may arise and the associated "wandering" of the light spot on the reflector.

Overview of reflector types

Recommended reflector sizes			
AMS 335i selection (Operating range in m)	Recommended reflector size (H x W)	Type designation …-S = Self-adhesive …-M = metal plate …-H = heating	Part no.
AMS 335i 40 (**max. 40m**)	200x200mm	Reflective tape 200x200-S Reflective tape 200x200-M Reflective tape 200x200-H	50104361 50104364 50115020
AMS 335i 120 (**max. 120m**)	500x500mm	Reflective tape 500x500-S Reflective tape 500x500-M Reflective tape 500x500-H	50104362 50104365 50115021
AMS 335i 200 (**max. 200m**)	749x914mm 914x914mm	Reflective tape 749x914-S Reflective tape 914x914-M Reflective tape 914x914-S Reflective tape 914x914-H	50104363 50104366 50108988 50115022
AMS 335i 300 (**max. 300m**)	749x914mm 914x914mm	Reflective tape 749x914-S Reflective tape 914x914-M Reflective tape 914x914-S Reflective tape 914x914-H	50104363 50104366 50108988 50115022

6.4 Mounting the reflector

6.4.1 General information

Self-adhesive reflective tapes

The reflective tapes of the "Reflective tape …x…**-S**" self-adhesive series must be affixed to a flat, clean and grease-free surface. We recommend using a separate metal plate, which is to be provided on-site.

As described in table 6.1, the reflective tape must be angled.

Reflective tapes on metal

The reflective tapes of the "Reflective tape …x…**-M**" series are provided with corresponding mounting holes. Spacer sleeves are provided in the packet for achieving the necessary pitch angle. For further information see table 6.1.

Heated reflectors

The reflective tapes of the "Reflective tape ...x...**-H**" series are provided with corresponding mounting holes. Due to the voltage supply affixed on the rear, the reflector cannot be mounted flat. Included in the package are four distance sleeves in two different lengths. Use the distance sleeves to achieve a base separation to the wall as well as the necessary pitch for avoiding surface reflection. For further information see table 6.1.

The reflector is provided with a 2 m-long connection cable for supplying with 230 VAC. Connect the cable to the closest power outlet. Observe the current consumptions listed in the specifications.

⚠ *Attention!*

Connection work must be carried out by a certified electrician.

6.4.2 Mounting the reflector

The combination of laser measurement system and reflective tape/reflector is mounted so that the laser light spot hits the tape as centered as possible and without interruption.

For this purpose, use the alignment elements provided on the AMS 335*i*… (see chapter 5.2 "Mounting the AMS 335i"). If necessary, remove the protective foil from the reflector.

⚠ *Attention!*

The "TOP" label mounted on the reflectors should be aligned the same as the connections of the AMS 335*i*.

Example:

If the AMS 335i is mounted so that the M12 connections are on the top, the "TOP" label of the reflector is also on the top. If the AMS 335i is mounted so that the M12 connections are on the side, the "TOP" label of the reflector is also on the side.

ⓘ *Notice!*

*The reflector must be angled. To do this, use the spacer sleeves. Angle the reflectors so that the **surface reflections of the foil seal are deflected to the left, right or upwards**. Avoid a downward pitch, as additional reflections may occur on the running rails. chapter 6.4.3 gives the correct pitch with respect to the reflector size and, thus, the length of the spacers.*

Reflective tape 914x914-S Reflective tape 914x914-M	**2 x 20 mm**	
Reflective tape 914x914-H	**2 x 15 mm**	**2 x 35 mm**

1) Spacer sleeves are included in the delivery contents of reflective tape …-**M** and …-**H**

Table 6.1:   Reflector pitch resulting from spacer sleeves

Notice!

*Reliable function of the AMS 335**i** and, thus, max. operating range and accuracy can only be achieved with the reflective tape specified by Leuze electronic. No function can be guaranteed if other reflectors are used!*

7 Electrical connection

The AMS 335*i* laser measurement systems are connected using variously coded M12 connectors. This ensures unique connection assignments.

○
╜ *Notice!*

The corresponding mating connectors and ready-made cables are available as accessories for all cables. For further information, see chapter 11 "Type overview and accessories".

7.1 Safety notices for the electrical connection

⚠ *Attention!*

Before connecting the device, be sure that the supply voltage agrees with the value printed on the name plate.
The device may only be connected by a qualified electrician.
Ensure that the functional earth (FE) is connected correctly. Unimpaired operation is only guaranteed when the functional earth is connected properly.
If faults cannot be corrected, the device should be removed from operation and protected against possible use.

⚠ *Attention!*

For UL applications, use is permitted exclusively in Class 2 circuits according to NEC (National Electric Code).

◇III◇ *The laser measurement systems are designed in accordance with safety class III for supply by PELV (protective extra-low voltage with reliable disconnection).*

○
╜ *Note!*

Protection class IP65 is achieved only if the connectors and caps are screwed into place!

Described in detail in the following are the individual connections and pin assignments.

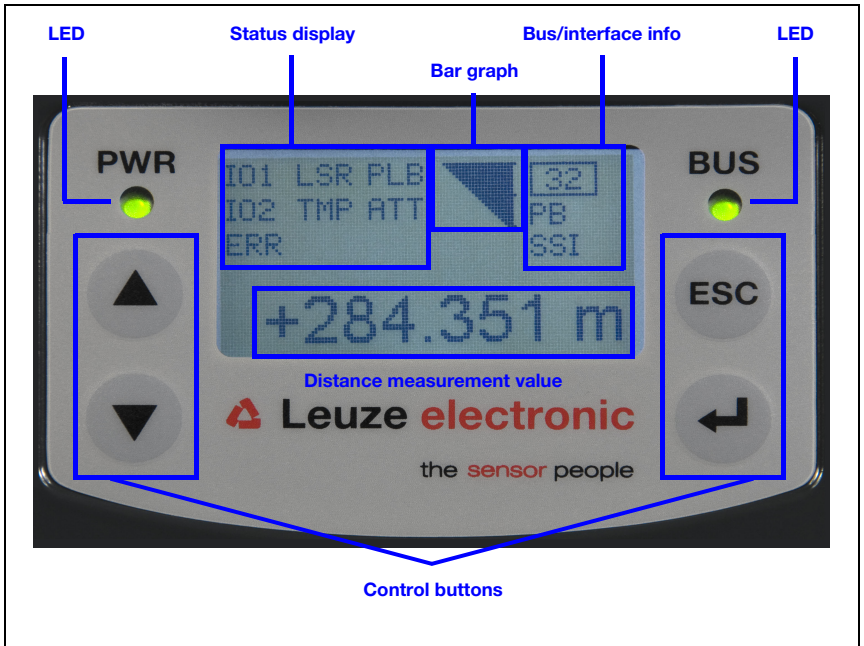

Figure 8.1:   Structure of the control panel using the AMS 304*i* PROFIBUS device variant as an example

○
介 *Notice!*
The figure is for illustration purposes only and does not correspond to AMS 335i with respect to bus/interface info.

8.2   Status display and operation

8.2.1   Indicators in the display

Status and warning messages in the display

IO1   **Input 1 or output 1 active:**
        Function depending on configuration.

IO2   **Input 2 or output 2 active:**
        Function depending on configuration.

LSR **Warning - laser prefailure message:**
Laser diode old, device still functional, exchange or have repaired.

TMP **Warning - temperature monitoring:**
Permissible internal device temperature exceeded / not met.

PLB **Plausibility error:**
Implausible measurement value. Possible causes: light beam interruption, outside of measurement range, permissible internal device temperature considerably exceeded or traverse rate >10m/s.

Depending on the configuration, either zero or the last valid measurement value is output at the interfaces.

ATT **Warning received signal:**
Laser outlet window or reflector soiled or fogged by rain, water vapor or fog. Clean or dry surfaces.

ERR **Internal hardware error:**
The device must be sent in for inspection.

Bar graph

Indicates the **strength of the received laser light**.

The center bar represents the **ATT** warning threshold. The distance value remains valid and is output at the interfaces.

If no bar graph is available, the **PLB** status information appears at the same time.

The measurement value has thus been assessed as being implausible. Depending on the configuration, either zero or the last valid measurement value is output at the interfaces.

Interface info

An activated CANopen interface is indicated by the presence of Node ID (bus address) and the "CAN" ID in the display. If the CANopen interface is deactivated, the Node ID and CAN ID are hidden from view.

Bus address
CAN ID
Position value

Position value

The measured position value is displayed in the configured unit of measurement.

+87.000m   With the **metric** setting, the measurement value is always displayed in meters with **three decimal places**.

+87.0in   With the **inch** setting, the measurement value is always displayed in inches with **one decimal place**.

8.2.3   Control buttons

(▲)   **Up**   Navigate upward/laterally.

(▼)   **Down**   Navigate downward/laterally.

(ESC)   **ESC**   Exit menu item.

(↵)   **ENTER**   Confirm/enter value, change menu levels.

Navigating within the menus

The menus within a level are selected with the up/down buttons (▲) (▼) .

The selected menu item is activated with the enter button (↵).

Press the ESC button (ESC) to move up one menu level.

When one of the buttons is actuated, the display illumination is activated for 10 min.

Setting values

If input of a value is possible, the display looks like this:

```
100
        <-I0123456789   save
    Default --------------- unit
126          I    I
```
⬛ + ↵   Delete character
⬛...⬛ + ↵   Enter digit

save + ↵   Save

Use the ▲ ▼ and ↵ buttons to set the desired value. An accidental, incorrect entry can be corrected by selecting <-I and then pressing ↵ .

Then use the ▲ ▼ buttons to select Save and save the set value by pressing ↵.

Selecting options

If options can be selected, the display looks like this:

```
o OFF
  ON
    Default --------------- unit
  OFF        I    I
```

Select the desired option with the ▲ ▼ buttons. Activate the option by pressing ↵.

8.3   Menu description

8.3.1   The main menus

After voltage has been applied to the laser, device information is displayed for several seconds. The display then shows the measurement window with all status information.
```

Notice!

*The rear cover of this manual includes a **fold-out page** with the complete **menu structure**. It describes the menu items in brief.*

8.3.2　Parameter menu

Parameter handling submenu

The following functions can be called up in the Parameter handling submenu:

- Lock and enable parameter entry
- Set up a password
- Reset the AMS 335*i* to default settings.

Table 8.1:   Parameter handling submenu

Level 3	Level 4	Level 5	Selection/configuration option Description	Standard
Parameter enabling			ON / OFF The standard setting (OFF) prevents unintended parameter changes. With parameter enabling activated (ON), the display is inverted. In this state, it is possible to change parameters manually.	OFF
Password	Activate password		ON / OFF To enter a password, parameter enabling must be activated. If a password is assigned, changes to the AMS 335*i* can only be made after the password is entered. The master password 2301 bridges the individually set password.	OFF
	Password entry		Configuration option of a four-digit numerical password	
Parameters to default			By pressing the enter button ⏎ after selecting Parameters to default, all parameters are reset to their standard settings without any further security prompts. In this case, English is selected as the display language.	

Additional important information on parameter handling can be found at the end of the chapter.

CANopen submenu

Table 8.2:   CANopen submenu

Level 3	Level 4	Level 5	Selection/configuration option Description	Standard
Activation			ON / OFF	ON
Node ID			Value range 1 - 127	1
Baud rate			20kbit/s / 50kbit/s / 125k/bit/s / 250k/bit/s / 500k/bit/s / 800k/bit/s /1000k/bit/s Selection of the baud rate for serial communication. The baud rate specifies the speed of data transmission. It must be the same at the transmission and reception sides to enable communication.	125kbit/s
Position resolution			0.01mm / 0.1mm / 1mm / 10mm / free resolution The measurement value can be displayed in these resolutions. The value of the free resolution is determined in the "Position value" submenu in the "Value of free resolution" parameter.	1mm
Velocity resolution			1mm / 10mm / 100mm / 1000mm / free resolution The current velocity can be displayed in these resolutions. The value of the free resolution is determined in the "Velocity value" submenu in the "Value of free resolution" parameter.	1mm/s

Position value submenu

Notice!

The parameters named under position value are to be set via the EDS file of the AMS 335i.
If parameters from the position value submenu are changed via the display, these may be
overwritten via a startup sequence stored in the control.

Table 8.3: Position value submenu

| Level 3	Level 4	Level 5	Selection/configuration option Description	Standard
Measurement unit			Metric/Inch Specifies the units of the measured distances	Metric
Count direction			Positive/Negative Positive: The measurement value begins at 0 and increases with increasing distance. Negative: The measurement value begins at 0 and decreases with increasing distance. Negative distance values may need to be compensated with an offset or preset.	Positive
Offset			Output value=measurement value+offset. The resolution of the offset value is independent of the selected "Resolution position" and is entered in mm or inch/100. The offset value is effective immediately following entry. If the preset value is activated, this has priority over the offset. Preset and offset are not offset against each other.	0 mm
Preset			The preset value is accepted by means of teach pulse. The teach pulse can be applied to a hardware input of the M12 PWR connector. The hardware input must be appropriately configured. See also configuration of the I/Os.	0 mm
Free resolution value			The measurement value can be resolved in increments of 1/1000 within the 5 … 50000 value range. If, e.g., a resolution of 0.875 mm per digit is required, the parameter is set to 875. In the activated interface, the measurement value display must also be set to "free resolution" ("Resolution position" parameter).	1000
Error delay			ON / OFF Specifies whether, in the event of an error, the position value immediately outputs the value of the "Position value in the case of error" parameter or the last valid position value for the configured error delay time.	ON/100 ms
Position value in the case of error			Last valid value / zero Specifies which position value is output after the error delay time elapses.	Zero

I/O submenu

Table 8.4:   I/O submenu

Level 3	Level 4	Level 5	Selection/configuration option Description	Standard
I/O 1	Port config- uration		Input/Output Defines whether I/O 1 functions as an output or input.	Output
	Switching input	Function	No function/preset teach/laser ON/OFF	No function
		Activation	Low active/High active	Low active
	Switching output	Function	Pos. limit value 1 / Pos. limit value 2 / Velocity / Intensity (ATT) / Temp. (TMP) / Laser (LSR) / Plausibility (PLB) / Hardware (ERR) The individual functions are "ORed" on the selected switching out- put.	Plausibility (PLB), hardware (ERR)
		Activation	Low active/High active	Low active
I/O 2	Port config- uration		Input/Output Defines whether I/O 2 functions as an output or input.	Output
	Switching input	Function	No function/preset teach/laser ON/OFF	No function
		Activation	Low active/High active	Low active
	Switching output	Function	Pos. limit value 1 / Pos. limit value 2 / Velocity / Intensity (ATT) / Temp. (TMP) / Laser (LSR) / Plausibility (PLB) / Hardware (ERR) The individual functions are "ORed" on the selected switching out- put.	Intensity (ATT), Temp. (TMP), Laser (LSR)
		Activation	Low active/High active	Low active
Limit values	Upper pos. limit 1	Activation	ON / OFF	OFF
		Limit value input	Value input in mm or inch/100	0
	Lower pos. limit 1	Activation	ON / OFF	OFF
		Limit value input	Value input in mm or inch/100	0
	Upper pos. limit 2	Activation	ON / OFF	OFF
		Limit value input	Value input in mm or inch/100	0
	Lower pos. limit 2	Activation	ON / OFF	OFF
		Limit value input	Value input in mm or inch/100	0

Other submenu

Table 8.5:　　　　Other submenu

Level 3	Level 4	Level 5	Selection/configuration option Description	Standard
Heating control			Standard (10°C … 15°C)/Extended (30°C … 35°) Defines a switch-on/switch-off range for the heating control. The extended switch-on/switch-off range for heating may provide relief in the event of condensation problems. There is no guarantee that no condensation will occur on the optics in the extended switch-on/switch-off range due to the limited heating capacity. This parameter is available as standard, but functions only for devices with integrated heating (AMS 335*i*… **H**).	Standard
Display illumination			10 minutes/ON Display illumination is switched off after 10 minutes or, if the parameter is set to "ON", illumination is always on.	10 min.
Display contrast			Weak/Medium/Strong The display contrast may change at extreme temperature values. The contrast can subsequently be adapted using the three levels.	Medium
Service RS232	Baud rate		57.6 kbit/s / 115.2 kbit/s The service interface is only available to Leuze internally.	115.2 kbit/s
	Format		8,e,1 / 8,n,1 The service interface is only available to Leuze internally.	8,n,1

8.3.3　Language selection menu

```
Language selection
o Deutsch
● English
o Español
o Français
o Italiano
```
There are 5 display languages available:

- German
- English
- Spanish
- French
- Italian

The AMS 335*i* is delivered from the factory with the display preset to English.

Notice!
When operating the AMS 335i on the CANopen, the language configured in the EDS file is used in the display.

To change the language, no password needs to be entered nor must password enabling be activated. The display language is a passive operational control and is, thus, not a function parameter, per se.

8.3.4   Service menu

```
Service
 Status messages
 Diagnostics
 Expanded diagnostics
```
A more detailed description of the individual functions can be found in chapter 10.

8.4   Operation

Described here is an operating process using parameter enabling as an example.

Parameter enabling

During normal operation parameters can only be viewed. If parameters are to be changed, the ON menu item in the Parameter -> Parameter handling -> Parameter enable menu must be activated. To do this, proceed as follows:

```
Parameter
  Parameter handling
  CANopen
  Position value
  I/O
  Other
```
In the main menu, press the enter button to enter the Parameter menu.

Use the ▲ ▼ buttons to select the Parameter handling menu item.

```
Parameter handling
o Parameter enabling
o Password
☐ Parameters to default
```
Press the enter button to enter the Parameter handling menu.

In the Parameter handling menu, use the ▲ ▼ buttons to select the Parameter enabling menu item.

```
Parameter enabling
o OFF
o ON
```
Press the enter button to enter the Parameter enabling menu.

In the Parameter enabling menu, use the ▲ ▼ buttons to select the ON menu item.

Press the enter button to switch on parameter enabling.

```
Parameter enabling
o  OFF
●  ON
```

The PWR LED illuminates orange; the display is inverted. You can now set the individual parameters on the display.

Press the ESC button twice to return to the Parameter menu.

Viewing and editing parameters

As long as parameter enabling is activated, the entire AMS 335*i* display is inverted.

As long as parameter enabling is activated, communication between control and AMS 335*i* is interrupted. The continued networking via BUS OUT is retained.

Notice!

If a password was stored, parameter enabling is not possible until this password is entered, see "Password for parameter enabling" below.

Password for parameter enabling

Parameter entry on the AMS 335*i* can be protected with a password. With the AMS 335*i*, the password is defined via the EDS file (class 100, instance 1). Thus, the password cannot be changed by means of display entry.

To activate parameter enabling via the display (e.g., for changing an address), the password defined in the EDS file must be entered. If parameter enabling has been activated after successfully entering the password, parameters can temporarily be changed via the display.

After deactivating the parameter enable, all changes made to the display are overwritten by the start-up sequence that may be stored in the control (see above). If a new password has been assigned, this, too, is overwritten by the password defined in the EDS file.

Notice!

*The **master password 2301** can enable the AMS 335i at any time.*

9 CANopen interface

9.1 General information on CANopen
9.1.1 Topology

Figure 9.1: Bus topology

The CAN bus is a serial 2-wire bus system to which all participants are connected in parallel (i.e., using short drop lines). To avoid reflections, the bus must be terminated with a terminating resistor of 120 ohm at each end of the trunk line. Terminating resistors are also required for very short trunk line cable lengths.

If the AMS 335*i* is the last participant in the trunk line, the trunk line can be terminated via the M 12 bus OUT connection. For this purpose, Leuze electronic offers an M 12 terminating resistor, see chapter 11 "Type overview and accessories".

9.1.2 Bus line (trunk line)

For CAN, the maximum cable length of the trunk line is predominantly limited by the signal propagation time. The multi-master bus-access process (arbitration) requires that the signals are present virtually simultaneously at all nodes/participants. Therefore, the cable length of the trunk cable must be adapted to the baud rate.

Baud rate	Bus length
1 Mbit/s	< 20 m
800 kbit/s	< 50 m
500 kbit/s	< 100 m
250 kbit/s	< 250 m
125 kbit/s	< 500 m
50 kbit/s	< 1000 m
20 kbit/s	< 2500 m

9.1.3   Stub lines (drop lines)

If possible, drop lines should be avoided because they cause signal reflections as a matter of principle. Generally, the reflections caused by drop lines are not critical, however, if the following drop line lengths are not exceeded.

Baud rate	Length of drop line	Total length of all drop lines
1 Mbit/s	< 1 m	< 5 m
800 kbit/s	< 1 m	< 25 m
500 kbit/s	< 1 m	< 25 m
250 kbit/s	< 10 m	< 50 m
125 kbit/s	< 20 m	< 100 m
50 kbit/s	< 50 m	< 250 m
20 kbit/s	< 50 m	< 250 m

Attention!

*Drop lines must not be fitted with terminating resistors. If the AMS 335**i** is integrated into a drop line, the M12 bus OUT connection must not be terminated.*

Figure 9.1:   Prohibited networking within a drop line

Attention!

*AMS 335**i** should not be networked with each other within a drop line. The max. permissible cable length of a drop line must not be exceeded. Taps and multi-taps permit a wide range of topologies.*

9.2   Address assignment

○ ***Notice!***

The participant-specific address for CANopen is also called the Node ID. Throughout this handbook, the term "address" is used, which is identical to "Node ID".

Each participant connected to CANopen is assigned its own address (Node ID).

Up to 127 participants can be connected to one network. The addresses range from 1 to 127. The address 0 is usually reserved for the CANopen master.

○ ***Notice!***

The "Layer Setting Services (LSS)" function is not supported by the AMS 335***i***. For this reason, the address must be set manually via the display/panel of the AMS.

9.2.1   Entering the address via the display

To enter the address via the display, proceed as follows:

↳ *Activate parameter enabling.*

↳ *Select the CANopen submenu.*

↳ *Select the Node ID menu item.*

↳ *Enter an address between 1 and 127.*

↳ *Save the address with Save.*

↳ *Deactivate parameter enabling.*

○ ***Notice!***

Basic operation of the display is described in chapter 8. To set the address, parameter enabling must be activated.

⚠ ***Attention!***

The laser measurement system is deactivated on the CANopen when parameter enabling is activated, e.g. for address assignment.

If the AMS 335***i*** is connected directly in the trunk line and networked with further participants via Bus Out, these participants remain active even after the parameter enable has been activated.

The AMS 335***i*** is reactivated on CANopen after parameter enabling is exited.

9.3 Baud rate setting

The AMS 335*i* supports the following baud rates:

- 1 Mbit/s
- 800 kbit/s
- 500 kbit/s
- 250 kbit/s
- **125 kbit/s**
- 50 kbit/s
- 20 kbit/s

The default setting of the AMS 335*i* is 125 kbit/s.

The "Layer Setting Services (LSS)" function is not supported by the AMS 335*i*. The baud rate must be set manually via the display of the AMS.

9.3.1 Entering the baud rate via the display/panel

To enter the baud rate via display/panel, proceed as follows:

↳ *Activate parameter enabling.*

↳ *Select the CANopen submenu.*

↳ *Select the baud rate menu item.*

↳ *Activate the desired baud rate.*

↳ *Deactivate parameter enabling.*

Notice!

Basic operation of the display is described in chapter 8. To set the baud rate, parameter enabling must be activated.

Attention!

The laser measurement system is deactivated on the CANopen when parameter enabling is activated, e.g. for baud rate setting.
If the AMS 335i is connected directly in the trunk line and networked with further participants via Bus Out, these participants remain active even after parameter enable has been activated. The AMS 335i is reactivated on CANopen after parameter enabling is exited.
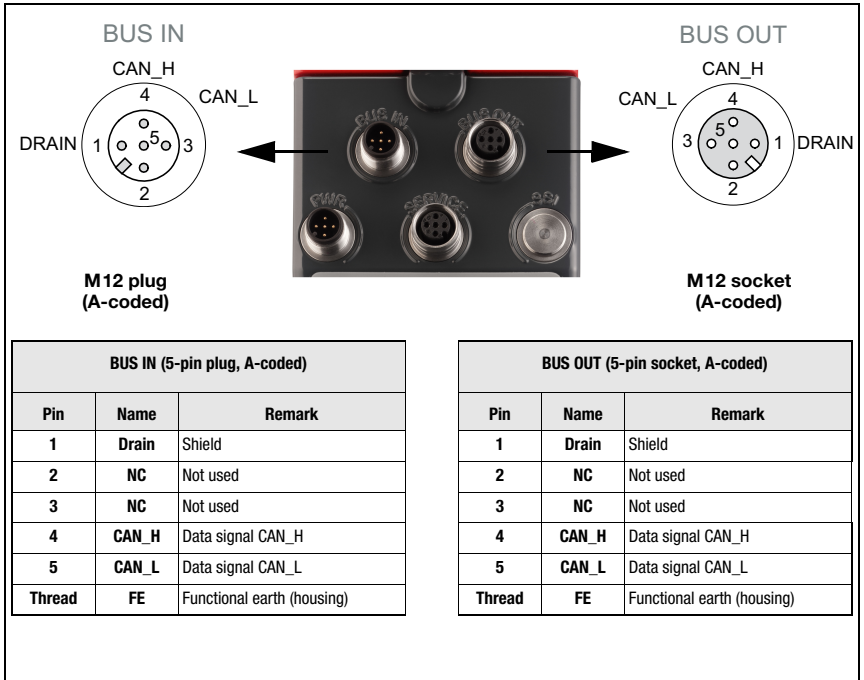

9.4 CANopen electrical connection

Figure 9.1:   CANopen - electrical connection

If the laser measurement system is the last subscriber in the network, the **BUS OUT** *con-nection must be connected to a terminator plug, see "Accessory terminating resistor" on page 90..*

Notice!

For contacting **BUS IN** *and* **BUS OUT***, we recommend our ready-made CANopen cable (see chapter 11.3.6 "Accessory ready-made cables for CANopen").*

9.5 Communication mechanisms of the AMS 335*i* on CAN

In a CANopen network, all participants have in principle equal privileges. Each participant can initiate its data transmission independently. Here, the arbitration specified by the CIA controls the access of the individual participants to the network. Generally, each CAN participant listens in on the bus. The transmission process is started only if the bus is not occupied by another CAN participant. When transmitting, the current bus status is always compared to the own transmitted frame.

If several participants start a transmission simultaneously, the arbitration process decides which participant gains access to the network next. The individual participants are integrated into a prioritization scheme via their bus address and the type of data to be transmitted (index address of the data). Process data (PDOs) of a device are transmitted with a higher priority than, for example, variable objects (SDOs) of a device.

The node address of the participant is another criterion for prioritizing a participant in the network. The smaller the node address, the higher the priority of the participant in the network.

Since every participant compares its own priority with that of the other participants at the time of bus access, the participants with low priority discontinue their transmission activities immediately. The participant with the highest priority obtains temporary access to the bus. The arbitration process controls the access of all participants so that even participants with a low priority have access to the bus.

9.5.1 Device profile of the AMS 335*i*

CANopen describes the characteristics of participants in so-called profiles. The AMS 335*i* communicates according to the specifications in profile "DS406" class 1.

The profile defines the accesses to an absolute linear encoder.

The AMS 335*i* is designed as a slave participant and cannot take on master functionality.

9.5.2 Object directories

All process data and parameters are stored as objects in the AMS 335*i*. The object directory of the AMS 335*i* is the compilation of all process data and parameters of the AMS.

An object directory is structured such that some objects within a device profile (DS406 for the AMS 335*i*) are mandatory while others are freely definable and stored in the manufacturer-specific object area.

The objects are uniquely identified using an index addressing scheme. The structure of the object directory, the assignment of the index numbers, as well as some mandatory entries are specified in the CIA standard DS301 for CANopen.

9.5.3   EDS file

For the user, the object directory of the AMS 335*i* is stored as an EDS file (Electronic Data Sheet).

The EDS file contains all objects with index, sub-index, name, data type, default value, minimum and maximum, and access privileges.

The EDS file describes the entire functionality of the AMS 335*i*.

9.5.4   SDOs and PDOs

The data exchange in CANopen distinguishes between service data objects (SDOs), which are used for transmitting the service data (parameters) from and to the object directory, and process data objects (PDOs), which are used to exchange the current process states.

9.5.4.1   SDOs

By using SDOs, all entries of the object directory can be accessed. Within one SDO call, only one object can be accessed at any one time. For this reason, a service data telegram must have a protocol structure which describes the exact target address by means of index and sub-index addressing. SDO telegrams place a part of the SDO addressing into the user data area. Eventually, a user data area with a width of 4 bytes out of the possible 8 bytes of user data remains for each SDO telegram.

The target address always responds to SDO transfers.

In the following, the index and sub-index address of the AMS 335*i* parameters and variables can be found in the individual object descriptions.

9.5.4.2   PDOs

PDOs are a grouping of objects (variables and parameters) from the object directory. A maximum of 8 bytes of user data from various objects can be mapped into one PDO.

A PDO can be received and evaluated by each participant (node). The model is referred to as the producer-consumer procedure.

Since there is no protocol structure in the telegram of a PDO, the participants in the network for whom these data are intended must know how the user data in the data area of the PDO are structured (which data are stored where in the user data area).

The exchange of process data is supported by the AMS 335*i* via the following accesses:

- Event-controlled data transfer
  Here, the data of a node are transmitted as a message whenever a change to the present state occurs.

- Polling with remote frames
  The CAN node which has been defined as master in the network requests the desired information via query (via remote frame). The participant which has this information (or the required data) responds by sending the requested data.

- Synchronized mode
  CANopen permits simultaneous querying of inputs and states of different participants and the simultaneous change of outputs or states. For this purpose, one uses the synchronization telegram (SYNC) transmitted by a master.
  The SYNC telegram is a broadcast to all network devices with high priority and without data content. Generally, the master sends the SYNC telegram cyclically.
  Participants working in synchronized mode read their data when receiving the SYNC message and then transmits them immediately afterwards as soon as the bus permits this (see explanation regarding arbitration process).
  As the SYNC process can very quickly lead to high bus loads, another distinction is made between "event-controlled synchronization" and a "timer synchronization".

- Time-controlled transmission
  In this case, the transmission of a PDO is triggered when an adjustable time period has elapsed. The time-controlled transmissions are set individually for each PDO via the so-called "inhibit time" or an "event timer". The respective parameters can be found in the objects 1800h to 1803h for the corresponding PDOs.

- Node monitoring
  Heartbeat and guarding mechanisms are available for failure monitoring of the AMS 335*i*. This is particularly important for CANopen, as the AMS 335*i* may not respond regularly in the event-controlled operating mode. In case of guarding, the participants are cyclically queried for their state via data request telegrams (remote frame). In case of heartbeat, the nodes transmit their state themselves.
  Heartbeat and guarding / life time are standard communication objects from the DS301 CANopen specification. The corresponding objects here are:
  - Heartbeat 1017_h
  - Guarding / Life time factor $100C_h$ and $100D_h$

9.5.5   Default 11 Bit - Identifier distribution

The AMS 335*i* sends an 11-bit identifier. 29-bit identifiers can neither be received nor transmitted by the AMS 335*i*.

The node address (address of the AMS 335*i*) is an integral part of the 11-bit identifier. The default identifier and the node address yield the COB-ID. Its value is used to determine the prioritization during arbitration.

Notice!

Identifiers with low values have a higher priority under arbitration.

Example:

If the same objects, e.g. PD01 (rx), are queried by several AMS 335*i* in a CANopen network, the AMS with the smallest node address has the highest priority under arbitration.

The table printed below shows the values of the individual functions in the CANopen arbitration process.

As can been see from the table, synchronization and emergency objects have the highest priority. Next in line are the PDOs, and the SDOs have the lowest priority.

Identifier 11 Bit (binary)	Identifier dec.	Identifier hex.	Function
00000000000	0	0	Network management
00010000000	128	80	Synchronization
0001xxxxxxx	129 - 255	81 - FF	Emergency
0011xxxxxxx	385 - 511	181 - 1FF	PD01 (tx)
0100xxxxxxx	513 - 639	201 - 27F	PD01 (rx)
0101xxxxxxx	641 - 767	281 - 2FF	PD02 (tx)
0110xxxxxxx	769 - 895	301 37F	PD02 (rx)
0111xxxxxxx	897 - 1023	381 - 3FF	PD03 (tx)
1000xxxxxxx	1025 - 1151	401 - 47F	PD03 (rx)
1001xxxxxxx	1153 - 1279	481 - 4FF	PD04 (tx)
1010xxxxxxx	1281 - 1407	501 - 57F	PD04 (rx)
1011xxxxxxx	1409 - 1535	581 - 5FF	SDO transmit
1100xxxxxxx	1537 - 1663	601 - 67F	SDO receive
1110xxxxxxx	1793 - 1919	701 - 77F	NMT Error Control
xxxxxxx = node address 1 - 127			

9.5.6 The communication-specific objects according to DS301, DS406 and manufacturer-specific

Overview: CANopen-specific object area of the AMS 335i

The following overview table shows the CANopen-specific communication objects from DS301 supported by the AMS 335i. The manual describes only those objects for which AMS 335i-specific configurations can be made. All other objects are standard objects of the CANopen specification. These objects are described in DS301.

Object address in hex	CANopen-specific object area
1000	Device type
1001	Error register
100C	Guard time
100D	Life time factor
1017	Producer heartbeat time (required for heartbeat mechanism)
1018	Identity object (contains general information regarding the device)
1800	PDO 1 properties (asynchronous position value and state)
1801	PDO 2 properties (synchronous position value and state)
1802	PDO 3 properties (asynchronous velocity value and state)
1803	PDO 4 properties (synchronous velocity value and state)
1A00	TPDO 1 asynchronous position value and state
1A01	TPDO 2 synchronous position value and state
1A02	TPDO 3 asynchronous velocity value and state
1A03	TPDO 4 synchronous velocity value and state

Overview: manufacturer-specific object area of the AMS 335i

Object address in hex	AMS 335i-specific object area
2000	Maximum position value
2001	Static preset
2002	Dynamic preset
2010	Position limit value 1
2011	Position limit value 2
2020	Velocity
2021	Velocity limit value 1
2022	Velocity limit value 2
2023	Velocity limit value 3
2024	Velocity limit value 4
2025	Velocity limit value dynamic
2026	Velocity status
2050	I/O 1
2051	I/O 2
2060	Status and control laser ON/OFF
2070	Error handling procedures
2300	Other

Overview: encoder-specific object area of the AMS 335i

Object address in hex	Objects of the AMS 335i from the DS406 class 1 encoder profile
6000	Operating parameters
6004	Maximum position value
6500	Operating status
6501	Resolution measurement value

9.5.7   Detailed description of CANopen-specific object area

9.5.7.1   Object 1000ₕ Device type

The object describes the AMS 335*i* device type.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
1000	--	Device type	u32	ro	--	--	00080196 h	Device profile 196ₕ Encoder type 8ₕ

Object data structure

Byte	Bit								Remark
	7	6	5	4	3	2	1	0	
0	196 ₕ								Device profile (196ₕ)
1									
2	8 ₕ								Encoder type (8ₕ)
3									

Device profile

The $196_h = 406_d$ classification describes the profile of an encoder. Accordingly, the AMS 335*i* is integrated into the profile definition of an encoder.

The AMS 335*i* is a class 1 encoder acc. to profile 406_d

Encoder

The $8_h = 8_d$ classification describes the AMS 335*i* as an absolute linear encoder

9.5.7.2   Object 1001ₕ Error register

This object contains the error register for the AMS 335*i*. The AMS 335*i* maps the internal ERR error (see object 2060 status and control) in this byte to bit 0.

The bit 0 is set when the "ERR" errors of the AMS 335*i* are pending or if, for example, the initialization of the AMS 335*i* fails.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
1001	--	Error register	u8	ro	--	--	0	--

Object data structure

Byte	Bit								Remark
	7	6	5	4	3	2	1	0	
0	x	x	x	x	x	x	x	0	Error register

9.5.7.3　*Object 100C*ₕ *Guard time*

This object is used to configure the device monitoring by the NMT master (node guarding) together with the life time factor. The monitoring period is specified in milliseconds. If 0 is entered (default of the AMS 335*i*), the process is deactivated.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
100C	--	Guard time	u16	rw	0	65535	0	Guard time is deactivated via Default 0

9.5.7.4　*Object 100D*ₕ *Life time factor*

This object must be discussed in connection with object 100Cₕ. It represents a value that yields the lifetime when multiplied by the guard time.

If 0 is entered (default of the AMS 335*i*), the process is deactivated.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
100D	--	Life time	u 8	rw	0	255	0	Life time is deactivated via Default 0

9.5.7.5　*Object 1017*ₕ *Producer heartbeat time*

This object defines the cycle time as a multiple of milliseconds with which the AMS 335*i* sends heartbeat messages into the CANopen network. If the producer heartbeat time is not used, it is set to the value 0 (zero). By default, the time for the AMS 335*i* is set to 0 (zero), which means that the AMS 335*i* does not send a cyclical heartbeat signal.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
1017	--	Producer heartbeat time	u16	rw	0	65536	0	Producer heartbeat time is deactivated via Default 0

9.5.7.6　*Object 1018*ₕ *Identity object*

This object contains general specifications about the AMS 335*i*.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
1018	01	Vendor ID	u 32	ro	--	--	121 ₕ	Manufacturer ID number
	02	Product code	u 32	ro	--	--	02 ₕ	Product designation

9.5.7.7 Objects 1800ₕ - 1803ₕ Communication parameter process data objects (PDOs)

9.5.7.8 Objects 1A00ₕ - 1A03ₕ Process data objects TPDOs

The AMS 335*i* provides four transmit process data objects (TPDOs).

The TPDOs describe which objects are mapped (integrated) into the TxPDO and define the access (synchronous/asynchronous) to these objects.

- TPDO1 asynchronous position value and state, object address 1A00ₕ
- TPDO2 synchronous position value and state, object address 1A01ₕ
- TPDO3 asynchronous velocity value and state, object address 1A02ₕ
- TPDO4 synchronous velocity value and state, object address 1A03ₕ

The communication parameters of the PDOs are defined via fixed objects.

In these objects one specifies the synchronous or asynchronous access, a possible inhibit time for the PDO object on the CAN network, and an event timer.

- PDO1 communication parameters for asynchronous position value and state, object address 1800ₕ
- PDO2 communication parameters for synchronous position value and state, object address 1801ₕ
- PDO3 communication parameters for asynchronous velocity value and state, object address 1802ₕ
- PDO4 communication parameters for synchronous velocity value and state, object address 1803ₕ

The **asynchronous transmission** (TPDO1 and TPDO3) is controlled by the event timer in PDOx property objects 1800ₕ and 1803ₕ.

The **synchronous transmission** (TPDO2 and TPDO4) is initiated via a SYNC telegram (80ₕ) sent by the master, and via PDOx property objects 1801ₕ to 1803ₕ.

9.5.7.9 Object 1800ₕ PDO1

Communication parameters for asynchronous transmission of position and state.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
1800	01	COB-ID for TPDO1	u 32	ro	--	--		180h + Node ID
	02	Transmission type	u 8	rw	--	--	254	254 = asynchronous
	03	Inhibit time	u 16	rw	0	1000	0	Inhibit time
	04	Reserved						
	05	Event timer	u 16	rw	0	65535	0	Event timer

⚠️ **Attention!**

The inhibit timer can only be written to if the PDO has previously been set to "PDO invalid". This is done by setting bit 31 of the COB-ID for the respective PDO to 1, setting the inhibit time to the desired value, and then resetting bit 31 to 0 (=PDO valid). This applies to all 4 PDOs!

9.5.7.10 *Object 1A00*ₕ *TPDO1*

Asynchronous transmission of position and state.

3									

9.5.8　AMS 335*i*-specific object area

9.5.8.1 *Object 2000ₕ Position value*

The object position value describes the following entries:

- Sign for negative position values
- Unit of the position value: metric or inch
- Resolution of the position value
- Counting direction of the position value
- A possible offset value
- Value for the free resolution

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2000	01	Sign	u 8	rw	0	1	0	0 = two's complement 1 = sign + quantity
	02	Measurement unit	u 8	rw	0	1	0	0 = metric 1 = inch (in)
	03	Resolution	u 8	rw	0	6	4	Value 1 = 0.001 Value 2 = 0.01 Value 3 = 0.1 Value 4 = 1 Value 5 = 10 Value 6 = free resolution
	04	Count direction	u 8	rw	0	1	0	0 = positive 1 = negative for further remarks, see below
	05	Offset value	int 32	rw	-999999	999999	0	see remarks below
	06	Free resolution value	u 16	rw	5	50000	1000	see remarks below

Sub-index 03 resolution

The resolution in mm or inch/100, in accordance with the unit selected.

The value for the free resolution must be set in index 06.

Sub-index 04 counting direction

⚠ **Attention!**

The DS406 encoder specification prescribes that the counting direction can be set in object 6000 bit 3. Object 2000 sub-index 04 and object 6000 bit 3 overwrite each other.

The count direction changes the sign during velocity measurement.

For the CANopen interface, no negative position values can be transferred. In this case, the value 0 is output at the CANopen interface.

A suitable offset is to be selected so that only positive values are transferred.

Counting direction positive:
Counting direction negative:

Sub-index 05 offset value

The offset value in mm or inch/100, in accordance with the unit selected.

Output value = measurement value+offset.

If the preset value has been activated by a corresponding trigger signal, the preset value has priority over the offset value.

Preset value and offset value are not offset against each other. The resolution of the offset value is independent of the position value resolution selected. The offset value is active immediately without any further release.

Sub-index 06 free resolution

Free resolution in mm/1000 or inch/100000, in accordance with the unit selected.

The "free resolution" parameters from sub-index 03 and the "value free resolution" from sub-index 06 are mutually dependent. The value of the free resolution is multiplied by mm/1000 or inch/100000 in accordance with the unit selected. The multiplication product is then the free resolution that has been set.

9.5.8.2 Object 2001$_h$ Static preset value

The static preset value is a parameter that is not changed after the handover of the system to the end user. It is configured during commissioning and remains unchanged thereafter.

A preset value can be entered into the object. The preset value is activated with "preset teach" and deactivated with "preset reset". After preset teach, the current position value is offset against the configured preset value. After preset reset, the original measurement value is displayed.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2001	01	Preset value static	int 32	rw	-999999	999999	0	Preset value, in mm or in/100 depending on the unit selected
	02	Preset settings	u 8	rw	0	2	0	Value 1 = preset teach Value 2 = preset reset

9.5.8.3 Object 2002$_h$ Dynamic preset value

The dynamic preset value can be adapted permanently via the control.

The dynamic preset value is activated with "preset teach" and deactivated with "preset reset". After preset teach, the current position value is offset against the configured preset value. After preset reset, the original measurement value is displayed.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2002	01	Preset value static	int 32	rw	-999999	999999	0	Preset value, in mm or in/100 depending on the unit selected
	02	Preset settings	u 8	rw	0	2	0	Value 1 = preset teach Value 2 = preset reset

9.5.8.4 Object 2010ₕ Position limit value range 1

The position limit value range 1 object defines a distance range with lower and upper limits. If the measured value lies outside the configured range, the corresponding status bits are set in objects 2050ₕ, 2051ₕ and 2060ₕ.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2010	01	Enable position limit value 1	u8	rw	0	1	0	0 = deactivated 1 = activated
	02	Lower position limit value 1	int 32	rw	-999999	999999	0	see remarks below
	03	Upper position limit value 1	int 32	rw	-999999	999999	0	see remarks below

Sub-index 02ₕ / Sub-index 03ₕ

The lower and upper position limit values are entered in mm or inch/100 according to the unit selected.

9.5.8.5 Object 2011ₕ Position limit value range 2

The position limit value range 2 object defines a distance range with lower and upper limits. If the measured value lies outside the configured range, the corresponding status bits are set in objects 2050ₕ, 2051ₕ and 2060ₕ.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2011	01	Enable position limit value 2	u8	rw	0	1	0	0 = deactivated 1 = activated
	02	Lower position limit value 2	int 32	rw	-999999	999999	0	see remarks below
	03	Upper position limit value 2	int 32	rw	-999999	999999	0	see remarks below

Sub-index 02ₕ / Sub-index 03ₕ

The lower and upper position limit values are entered in mm or inch/100 according to the unit selected.

9.5.8.6 Object 2020ₕ Velocity

Outputs the current velocity with the configured resolution. The unit (metric or inch) is set in object 2000 sub-index 02 and also applies to the velocity. If no change is made in object 2000 sub-index 02, the AMS 335*i* uses the metric default setting.

The sign of the velocity is dependent on the count direction in object 2000 sub-index 04.

In the default setting a positive velocity is output when the reflector moves away from the AMS 335*i*. When the reflector moves towards the AMS 335*i*, negative velocities are output. If the "negative" count direction is configured in object 2000 sub-index 04, the velocity signs are reversed.

The integration time for the velocity averages all velocity values calculated during the selected period to yield a velocity value. This average velocity value is output via the interface.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2020	01	Velocity resolution	u8	rw	1	5	1	Value 1: = 1 Value 2: = 10 Value 3: = 100 Value 4: = 1000 Value 5 = free resolution
	02	Integration time velocity	u8	rw	0	6	3	Unit ms Value 0: = 2 Value 1: = 4 Value 2: = 8 Value 3: = 16 Value 4: = 32 Value 5: = 64 Value 6: = 128
	03	Free resolution velocity	u16	rw	5	50000	1000	The configured value is multiplied by mm/1000/s or in/100000/s.
	04	Velocity value	int 32	ro	-999999	999999	--	see below

The velocity value is mapped into process data objects 1A02ₕ and 1A03ₕ.

Sub-index 01ₕ

The current velocity output occurs with the configured resolution. The unit (metric or inch) is set in object 2000 sub-index 02 and also applies to the velocity.

9.5.8.7   *Object 2021ₕ Configuration velocity monitoring 1*

Objects 2021ₕ to 2024ₕ permit the comparison between the current velocity as measured by the AMS 335*i* and a limit stored in the respective object.

Notice!

Notice regarding velocity monitoring 1 - 4 and dynamic velocity monitoring

*If **position start** and **position end** are identical, velocity monitoring is not activated.*

If a direction-dependent limit value check is activated via the **direction selection** parameter, the values of **position start** and **position end** also define the direction. The check is always performed from **position start** to **position end**. For example, if the range start is "5500" and the range end is "5000", the direction-dependent check is only performed in the direction from "5500" to "5000". The limit value is not active in the opposite direction.

If the check is independent of direction, the order of **position start** and **position end** is irrelevant. Depending on the selected **switching mode**, if the value is above or below the defined limits, the limit value status in object 2026ₕ is set and, if configured, the switching output is set via object 2050ₕ or 2051ₕ.

Notice!

The explanations given above on the "Position start" and "Position end" parameters apply analogously for objects 2022ₕ through 2025ₕ.

9.5.8.13 Object 2050ₕ Configuration I/O 1

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2050	--	I/01	u 32	rw	--	--	--	see below

The settings in "bold" correspond to the default settings

Bit 0: function of the I/O 1 connection at PWR M12

   0 = input
   1 = output

Bit 1: activation

   0 = 1 - 0 transition
   1 = 0 - 1 transition

Bit 2 - Bit 7: reserve

   0 = reserve
   1 = NC

Bit 8: position limit value 1

Notice!
Bit 8 to bit 23 set the output via an "OR" logic.

If the position value lies outside of configured limit value 1, the output is set.

   0 = OFF
   1 = ON

Bit 9: position limit value 2
If the position value lies outside of configured limit value 2, the output is set.

   0 = OFF
   1 = ON

Bit 10: velocity limit value
If the velocity value lies outside of the configured values, the output is set. Monitoring from objects 2021h to 2025h is "OR" linked to this bit.

   0 = OFF
   1 = ON

Bit 11: intensity monitoring (ATT)
If the intensity of the received signal falls below the predefined limit value, the output is set.

   0 = OFF
   1 = ON

Bit 12: temperature monitoring (ATT)

If the internal device temperature lies outside the predefined limit values, the output is set.

0 = OFF
1 = ON

Bit 13: laser prefailure monitoring (LSR)

If the laser power falls below the predefined limit value, the output is set.

0 = OFF
1 = ON

Bit 14: plausibility monitoring (PLB)

If implausible measurement values are diagnosed, the output is set.

0 = OFF
1 = ON

Bit 15: hardware error (ERR)

If a hardware error is diagnosed, the output is set.

0 = OFF
1 = ON

Bit 16: reserve

Bit 17: velocity comparison limit value dynamic

0 = comparison inactive
1 = comparison active

Bit 18 - Bit 23: reserve

0 = reserve
1 = NC

Bit 24 - Bit 26: function of the I/O 1, if this has been defined as an input

Value 000 = **no function**
Value 001 = Preset teach, valid for static (object 2001) and dynamic (object 2002) preset
Value 010 = laser OFF. Laser diode is switched off

Bit 27 - Bit 31: reserve

0 = reserve
1 = NC

9.5.8.14 Object 2051$_h$ Configuration I/O 2

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2051	--	I/O2	u32	rw	--	--	--	see below

The settings in "bold" correspond to the default settings

Bit 0: function of the I/O 2 connection at PWR M12

    0 = input
    1 = output

Bit 1: activation

    0 = 1 - 0 transition
    1 = 0 - 1 transition

Bit 2 - Bit 7: reserve

    0 = reserve
    1 = NC

Bit 8: position limit value 1

Notice!

Bit 8 to bit 23 set the output via an "OR" logic.

If the position value lies outside of configured limit value 1, the output is set.

    0 = OFF
    1 = ON

Bit 9: position limit value 2

If the position value lies outside of configured limit value 2, the output is set.

    0 = OFF
    1 = ON

Bit 10: velocity limit value

If the velocity value lies outside of the configured values, the output is set. The monitoring from objects 2021$_h$ to 2025$_h$ are "OR" linked to this bit.

    0 = OFF
    1 = ON

Bit 11: intensity monitoring (ATT)

If the intensity of the received signal falls below the predefined limit value, the output is set.

    0 = OFF
    1 = ON

Bit 12: temperature monitoring (TMP)

If the internal device temperature lies outside the predefined limit values, the output is set.

> 0 = OFF
> **1 = ON**

Bit 13: laser prefailure monitoring (LSR)

If the laser power falls below the predefined limit value, the output is set.

> 0 = OFF
> **1 = ON**

Bit 14: plausibility monitoring (PLB)

If implausible measurement values are diagnosed, the output is set.

> **0 = OFF**
> 1 = ON

Bit 15: hardware error (ERR)

If a hardware error is diagnosed, the output is set.

> **0 = OFF**
> 1 = ON

Bit 16: reserve

Bit 17: velocity comparison limit value dynamic

> **0 = comparison inactive**
> 1 = comparison active

Bit 18 - Bit 23: reserve

Bit 24 - Bit 26: function of the I/O 2, if this has been defined as an input

> **Value 000 =**   **no function**
> Value 001 =   Preset teach, valid for static (object 2001) and dynamic (object 2002) preset
> Value 010 =   laser OFF. Laser diode is switched off

Bit 27 - Bit 31: reserve

> **0 = reserve**
> 1 = NC

9.5.8.15 Object 2060h Status of the AMS 335*i*

In sub-index 01, the object provides the following status messages of the AMS 335*i*.

- Laser status ON/OFF
- Preset status ON/OFF
- Preset teach activated/not activated
- Monitoring lower position limit value 1
- Monitoring upper position limit value 1
- Monitoring lower position limit value 2
- Monitoring upper position limit value 2
- Intensity (ATT)
- Temperature (TMP)
- Laser (LSR)
- Plausibility (PLB)

In sub-index 02, the laser diode can be switched OFF/ON.

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2060	01	Status	u32	ro	--	--	--	see below
	02	Laser ON/OFF	u8	rw	0	1	0	0 = laser ON 1 = laser OFF

Explanations on sub-index 01

Bit 0: hardware error (ERR)

0 = ok
1 = hardware error (ERR)

Bit 1 - Bit 3: reserve

0 = reserve
1 = NC

Bit 4: monitoring lower position value 1

0 = OK
1 = value less than limit

Bit 5: monitoring upper position value 1

0 = OK
1 = value exceeded

Bit 6: monitoring lower position value 2

0 = OK
1 = value less than limit

Bit 7: monitoring upper position value 2

0 = OK
1 = value exceeded

Bit 8: laser status

0 = OK
1 = laser OFF

Bit 9: preset status

0 = preset inactive

1 = preset active

Bit 10: preset teach (toogle bit)

This bit toggles on each teach event of a preset value

Bit 11 - Bit 12: reserve

0 = reserve
1 = NC

Bit 13: intensity (ATT)

If the intensity of the received signal falls below the predefined limit value, the warning is set.

0 = ok
1 = warning

Bit 14: temperature (TMP)

If the internal device temperature lies outside the predefined limit values, the warning is set.

0 = OK
1 = warning

Bit 15: laser (LSR)

If the laser power falls below the predefined limit value, the warning is set.

0 = OK
1 = warning

Bit 16: plausibility (PLB)

If implausible measurement values are diagnosed, the error is set.

0 = OK
1 = error

Bit 17 - Bit 31: reserve

0 = reserve
1 = NC

9.5.8.16 Object 2070ₕ Behavior of the AMS 335*i* in the case of error

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2070	01	Position value in the case of error and delay for error ON/OFF	u8	rw	0	13	13	see below
	02	Position error message delay	u16	rw	100	1000	100	Delay of the error message in ms
	03	Position value in the case of error and delay for error ON/OFF	u8	rw	0	13	13	see below
	04	Error delay time - velocity	u16	rw	200	1000	200	

Explanation on sub-index 01

Bit 0: position value in the case of error

> 0 = last valid value
> **1 = zero**

Bit 1: static 0

Bit 2: suppress position state

> 0 = OFF
> **1 = ON**

Bit 3: error delay position

> 0 = OFF
> **1 = ON**

Explanation on sub-index 03

Bit 0: velocity value in the case of error

> 0 = last valid value
> **1 = zero**

Bit 1: static 0

Bit 2: suppress velocity state

> 0 = OFF
> **1 = ON**

Bit 3: error delay velocity

> 0 = OFF
> **1 = ON**

9.5.8.17 Object 2300$_h$ Other

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
2300	01	Display language selection	u8	rw	0	4	0	**0 = English** 1 = German 2 = Italian 3 = Spanish 4 = French
	02	Illumination duration display	u8	rw	0	1	0	**0 = off after 10min.** 1 = always on
	03	Display contrast	u8	rw	0	2	1	0 = low **1 = medium** 2 = high
	04	Password activation	u8	rw	0	1	0	**0 = OFF** 1 = ON
	05	Password	u16	rw	0000	9999	0000	Setting of a 4-digit password
	06	Heating control	u8	rw	0	1	0	see below

Notice!

Password activation must be set to ON.

Explanation on sub-index 06 "heating control"

> 0 = Standard (10°C … 15°C)
> 1 = Extended (30°C … 35°C)

Notice!

The sub-index 06 is available as standard, but functions only for devices with integrated heating (AMS 335i … H).

Sub-index 06 defines a switch-on/switch-off range for the heating control. The extended switch-on/switch-off range for heating may provide relief in the event of condensation problems. There is no guarantee that no condensation will occur on the optics in the extended switch-on/switch-off range due to the limited heating capacity.

9.5.9   Objects of the AMS 335*i* from the DS406 class 1 encoder profile

CANopen describes the characteristics of participants in so-called profiles.

The AMS 335*i* communicates according to the specifications in profile "DS406" class 1.

For class 1, it is mandatory to describe the following objects.

9.5.9.1   Object 6000ₕ Operating parameters

Index (hex)	Sub-index (hex)	Name	Data type	Access	Value range			Remark
					Minimum	Maximum	Default	
6000	--	Operating parameters	u16	rw	0	8	0	0= positive counting direction, see below

Bit 0 - Bit 2
not used

Bit 3: counting direction
0 = positive - the measurement value increases with increasing distance.
1 = negative - the measurement value decreases with increasing distance.

Counting direction positive:

0m   +100m

Counting direction negative:

0m   −100m
Bit 4 - Bit 15: reserve

9.5.9.2   Object 6004ₕ Position value

Index (hex)	Sub-index (hex)	Name	Data type	Access	Value range			Remark
					Minimum	Maximum	Default	
6004	--	Maximum position value	int 32	ro	-999999	999999	--	see below

Object 6004ₕ contains the position value for process data objects (PDOs) 1A00ₕ (TPDO1) and 1A01ₕ (TPDO2).

Byte	Bit								Remark
	7	6	5	4	3	2	1	0	
0								LSB	Maximum position value
1									
2									
3	MSB								

9.5.9.3 Object 6500ₕ Display of operating status from object 6000

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
6500	--	Operating parameters	u16	ro	--	--	--	see below

Bit 0 - Bit 2

not used

Bit 3: counting direction

0 = positive - the measurement value increases with increasing distance.
1 = negative - the measurement value decreases with increasing distance.

Bit 4 - Bit 15: reserve

9.5.9.4 Object 6501ₕ Measurement step

Index	Sub-index	Name	Data type	Access	Value range			Remark
(hex)	(hex)				Minimum	Maximum	Default	
6501	--	Measure-ment steps	u32	ro	--	--	--	see below

The resolution set in object 2000ₕ sub-index 03 is specified in multiples of 0.001 µm (1nm) in object 6501.

Example:

If the default resolution in object 2000ₕ is set to 1 mm, the resolution for object 6501 is converted to value 1 000 000. (1 000 000 x 1/1 000 000 = 1).

10 Diagnostics and troubleshooting

10.1 Service and diagnostics in the display of the AMS 335*i*

In the main menu of the AMS 335*i*, expanded "Diagnostics" can be called up under the Service heading.

```
Service
 Status messages
 Diagnostics
 Expanded diagnostics
```
From the Service main menu, press the enter button ⏎ to access the underlying menu level.

Use the up/down buttons ▲ ▼ to select the corresponding menu item in the selected level; use the enter button ⏎ to activate the selection.

Return from any sub-level to the next-higher menu item by pressing the ESC button (ESC).

10.1.1 Status messages

The status messages are written in a ring memory with 25 positions. The ring memory is organized according to the FIFO principle. No separate activation is necessary for storing the status messages. Power OFF clears the ring memory.

```
Status messages
1: - / - / -
2: - / - / -
3: - / - / -
```
The status messages within the ring memory are selected with the up/down buttons ▲ ▼. Use the enter button ⏎ to call up detailed information about the respective status message that includes the following details:

Type: Designates the message type **I** = info; **W** = warning, **E** = error.

No: Internal numbering

Ref.:   Plain-text explanation of the displayed status

Time: Time stamp in the hh.mm format. The displayed time is added to the time since the last power ON. Power OFF clears the time stamp.

10.1.2 Diagnostics

The diagnostics function is activated by selecting the Diagnostics menu item. The ESC button ⓔⓢⓒ deactivates the diagnostics function and clears the contents of the recordings.

The recorded diagnostic data are displayed in 2 fields. In the upper half of the display, status messages of the AMS and the bar graph are displayed. The lower half contains information that assists in a Leuze-internal evaluation.

```
IO1  LSR  PLB
IO2  TMP  ATT
ERR
Pos. act.:    --------
Pos. min.:    --------
Pos. max.:    --------
```
Use the up/down buttons ⓐ ⓥ to scroll in the bottom half between various displays. The contents of the scrollable pages are intended solely for Leuze for internal evaluation.

The diagnostics have no influence on the communication to the host interface and can be activated during operation of the AMS 335*i*.

10.1.3 Expanded diagnostics

The Expanded diagnostics menu item is used for Leuze-internal evaluation.

10.2   General causes of errors

10.2.1 Power LED

See also chapter 8.2.2.

Error	Possible error cause	Measure
PWR LED "OFF"	No supply voltage connected	Check supply voltage.
	Hardware error	Send in device.
PWR-LED "flashes red"	Light beam interruption	Check alignment.
	Plausibility error	Traverse rate >10m/s.
PWR-LED "static red"	Hardware error	For error description, see display, It may be necessary to send in the device.

Table 10.1:   General causes of errors

10.3   Interface errors

10.3.1   BUS LED

For further information on the LED status displays, see chapter 8.2.2 "LED status displays".

Error	Possible error cause	Measure
BUS LED "OFF"	Power off on AMS 335*i*	Check supply voltage.
BUS-LED "flashes red"	Invalid configuration	
BUS LED "static red"	No bus connection	
Bus LED "flashes green/ red"	- Bus error - Time out - RX /TX Buffer overflow - Termination error	

Table 10.2:   Bus error

10.4   Status display in the display of the AMS 335*i*

Display	Possible error cause	Measure
PLB (implausible measurement values)	Laser beam interruption	Laser spot must always be incident on the reflector.
	Laser spot outside of reflector	Traverse rate < 10 m/s?
	Measurement range for maximum distance exceeded	Restrict traversing path or select AMS with larger measurement range.
	Velocity greater than 10 m/s	Reduce velocity.
	Ambient temperature far outside of the permissible range (TMP display; PLB)	Select AMS with heating or ensure cooling.
ATT (insufficient received signal level)	Reflector soiled	Clean reflector or glass lens.
	Glass lens of the AMS soiled	
	Performance reduction due to snow, rain, fog, condensing vapor, or heavily polluted air (oil mist, dust)	Optimize usage conditions.
	Laser spot only partially on the reflector	Check alignment.
	Protective foil on the reflector	Remove protective foil from reflector.
TMP (operating temperature outside of specification)	Ambient temperatures outside of the specified range	In case of low temperatures, remedy may be an AMS with heating. If temperatures are too high, provide cooling or change mounting location.
LSR Laser diode warning	Laser diode prefailure message	Send in device at next possible opportunity to have laser diode replaced. Have replacement device ready.
ERR Hardware error	Indicates an uncorrectable error in the hardware	Send in device for repair.

Notice!

12 Maintenance

12.1 General maintenance information

With normal use, the laser measurement system does not require any maintenance by the operator.

Cleaning

In the event of dust build-up or if the (ATT) warning message is displayed, clean the device with a soft cloth; use a cleaning agent (commercially available glass cleaner) if necessary.

Also check the reflector for possible soiling.

Attention!

Do not use solvents and cleaning agents containing acetone. Use of such solvents could blur the reflector, the housing window and the display.

12.2 Repairs, servicing

Attention!

Access to or changes on the device, except where expressly described in this operating manual, are not authorized.

The device must not be opened. Failure to comply will render the guarantee void. Warranted features cannot be guaranteed after the device has been opened.

Repairs to the device must only be carried out by the manufacturer.

⮩ *Contact your Leuze distributor or service organization should repairs be required.*
  The addresses can be found on the inside of the cover and on the back.

Notice!

When sending the laser measurement systems to Leuze electronic for repair, please provide an accurate description of the error.

12.3 Disassembling, packing, disposing

Repacking

For later reuse, the device is to be packed so that it is protected.

Note!

Electrical scrap is a special waste product! Observe the locally applicable regulations regarding disposal of the product.
