Retroreflective area sensor

C∈ c(UL)us VISC↔

Model Number

RLG28-55/115b/136

Retroreflective area sensor with 300 mm fixed cable and 4-pin, M12 x 1 connector

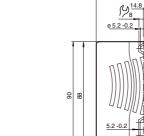

Features

- Retro-reflective area sensor with 6 light beams in standard photoelectricsensor enclosure
- Connection compatibly replaces single beam photoelectric sensor
- Reliable detection of the front edge of the object irrespective of its shape and position
- Constant object detection from 12
 mm within the entire detection area
- Reliable detection of all surfaces irrespective of the object texture
- Switches when contrast difference 10%
- Bright, highly visible transmitter beams, guarantee convenient alignment of the sensor

Product information

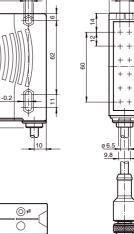

The RLG28 retro-reflective area sensor contains several transmitters and receivers in one housing and with a reflector positioned opposite forms a 60 mm detection area over a sensing range of 4 m.

When the light beams are interrupted by an object, the switching function is triggered. The smallest detectable object size is 12 mm. The RLG28 switches at a 10% contrast difference with a response time of 1 ms. An intelligent gain control compensates for effects such as dirt, misalignment, and temperature.

	cULus Listed, Class 2 Power Source	
UL approval CCC approval	cULus Listed, Class 2 Power Source Products with a maximum operating voltage of ≤36 V do not bear a CCC marking because they do not require approval.	

Mounting:

Ensure that the transmitted red light fully illuminates the reflector.

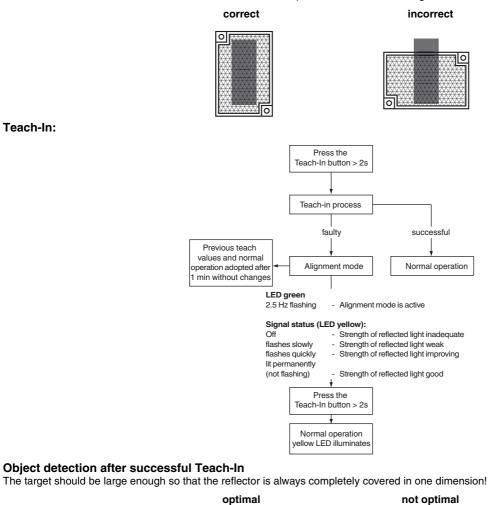

To ensure optimal detection, the entire 60 mm high light spot must appear on the reflector.

To check this illumination, look at the reflector from over the top of the the sensor housing.
